the design and functioning of an information system improve to the extent that the system can handle the questions people ask surprisingly however researchers in the cognitive computer and information sciences have not thoroughly examined the multitude of relationships between information systems and questions both question asking and answering the purpose of this book is to explicitly examine these relationships chapter contributors believe that questions play a central role in the analysis design and use of different kinds of natural or artificial information systems such as human cognition social interaction communication networks and intelligent tutoring systems their efforts show that data structures and representations need to be organized around the questioning mechanisms in order to achieve a quick retrieval of relevant useful information

design is about the creation of meaningful connections to solve problems and advance human wellbeing the discipline has always explored the beneficial links between form and function technology and meaning beauty and utility people and artefacts and problems and solutions among others this book focuses on the crucial connection between design research and design education contemporary society grows increasingly hyper complex and globally competitive this state of affairs raises fundamental questions for both design education and design research should research skills be integrated into undergraduate courses how can we modify design courses without compromising the positive aspects of the educational studio experience can the three cycles of higher education in design be combined into a creative and inquisitive educational continuum to examine the relationship between research and education in design we must address the topic of knowledge keeping in mind that the development and dissemination of new and useful knowledge is the core purpose of a university if we agree that design has its own things to know and ways to find out about them then design knowledge resides in people processes products and philosophy this book explores the intersection of these four areas with the aim of uncovering insights to advance the current

effective inquiry for innovative engineering design presents empirical evidence for this claim it demonstrates a unique attribute of design thinking by identifying and characterizing a class of questions called generative design questions these questions are frequently asked by designers in dialog their use constitutes a fundamental cognitive mechanism in design thinking their discovery stems from another finding of the work a conceptual duality between questions and decisions that is engraved deep within the design process this duality challenges a view that treats designing as decision making decisions form the tip of the iceberg questions keep it afloat can an effective decision making process be performed without having high quality information can high quality information be acquired and generated without performing an effective inquiry process the answer to both questions is no and underscores the importance of our quest to better understand the role of inquiry in design

design thinking as a user centric innovation method has become more and more widespread during the past years an increasing number of people and institutions have experienced its innovative power while at the same time the demand has grown for a deep evidence based understanding of the way design thinking functions this challenge is addressed by the design thinking research program between stanford university palo alto usa and hasso plattner institute potsdam germany summarizing the

outcomes of the 5th program year this book imparts the scientific findings gained by the researchers through their investigations experiments and studies the method of design thinking works when applied with diligence and insight with this book and the underlying research projects we aim to understand the innovation process of design thinking and the people behind it the contributions ultimately center on the issue of building innovators the focus of the investigation is on what people are doing and thinking when engaged in creative design innovation and how their innovation work can be supported therefore within three topic areas various frameworks methodologies mind sets systems and tools are explored and further developed the book begins with an assessment of crucial factors for innovators such as empathy and creativity the second part addresses the improvement of team collaboration and finally we turn to specific tools and approaches which ensure information transfer during the design process all in all the contributions shed light and show deeper insights how to support the work of design teams in order to systematically and successfully develop innovations and design progressive solutions for tomorrow

governments and road safety agencies around the world have either introduced or are considering safe system strategies a long overdue acknowledgement that different elements of the road system contribute to road safety outcomes human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in

providing practical approaches to support true systems based countermeasures this book illustrates the potential for integrating contemporary systems based human factors methods with modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems the book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors approaches can be applied successfully to road transport to revolutionise the countermeasure design process the practical illustrations of these human factors methods are applied to a long standing road and rail safety issue rail level crossings where the road and rail systems intersect the final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach
