if your company is adopting world class manufacturing techniques you ll need new methods of performance measurement to control production variables in practical terms this book describes the new methods of performance measurement and how they are used in a changing environment for manufacturing managers as well as cost accountants it provides the theoretical foundation for these innovative methods and is supported by extensive practical examples

technology is no longer confined to the laboratory but has become an established part of our daily lives its sophistication offers us power beyond our human capacity which can either dazzle or threaten it depends who is in control living in a technological culture

challenges traditionally held assumptions about the relationship between man and machine it argues that contemporary science does not shape technology but is shaped by it neither discipline exists in a moral vacuum both are determined by politics rather than scientific inquiry by questioning our existing uses of technology this book opens up wider debate on the shape of things to come and whether we should be trying to change them now as an introduction to the philosophy of technology this will be valuable to students but will be equally engaging for the general reader
