this approach to bpd the second section presents the 2 1 2 year psychodynamic supportive treatment of a patient with bpd the four phases of treatment evaluation and treatment planning early phase middle phase and termination are discussed in detail and illustrated with session dialogue and critical commentary by the author the final section addresses two major problems therapist countertransference and patient acting out other topics include continuous intermittent supportive therapy psychopharmacology in supportive therapy and supportive aspects of inpatient treatments filling a significant gap in the literature this important new volume s systematic and comprehensive exposition of supportive therapy for borderline patients makes it an invaluable resource for all practitioners who work with this difficult population replete with clinically useful suggestions and guidelines it is ideal for trainees in all mental health disciplines it is relevant to any course on dynamic psychotherapy and serves as a text for all students of borderline pathology and its treatment

#### <u>Psychotherapy of the Quiet Borderline</u> <u>Patient</u>

1994

until recently borderline personality disorder has been the step child of psychiatric disorders many researchers even questioned its existence clinicians have been reluctant to reveal the diagnosis to patients because of the stigma attached to it but individuals with bpd suffer terribly and a significant proportion die by suicide and engage in non suicidal self injury this volume provides state of the art information on clinical course epidemiology comorbiditiesioned i ching specialized treatments 2023-09-30 14/25

#### living i ching using ancient chinese wisdom to shape your life Borderline and Narcissistic Patients in Therapy

1988

borderline personality disorder tailoring the psychotherapy to the patient explores the challenge of treating patients with borderline personality disorder these patients make up a large segment of the difficult to treat population the instability of their relationships the intensity of their affective responses and their proneness to paranoid reactions all contribute to their difficulty in working consistently and constructively in the psychotherapeutic situation when one adds these difficult patient problems to the therapist s quandary about how expressive or supportive to be therapists are indeed often confronted with a challenging therapeutic task the book begins with a review of the clinical and research literature pertaining to the treatment of borderline patients it presents a unique empirically based intensive study of three borderline patients based on transcripts of audiotaped therapy sessions the research methodology is reviewed and clinically oriented descriptions of the three patients their psychotherapy processes and their outcomes are included following an overall summary of results conclusions regarding the differential indications for supportive versus expressive emphasis in psychotherapy are discussed in their research the authors recorded every psychotherapy session and studied a randomly selected group of sessions therefore the reader is provided with increased insight into what is most effective with what kind of patient at a given point in the therapy process
