Bovine Spongiform Encephalopathy 2012-12-06

the very first international working discussion on slow infections of the nervous system was entitled slow latent and temperate virus infections and was held at the national institutes of health nih in december 1964 the primary impetus was the discovery and investigation of kuru in new guinea by d carleton gajdusek m d this working discussion brought together investigators in human and veterinary medicine virologists microbiologists and neuropathologists actively engaged in laboratory work with viruses that illustrated properties of latency masking slowness or temperateness with emphasis on subacute and chronic neurologic diseases of unknown etiology in the preface to the monograph of published papers presented at the working discussion gajdusek and gibbs wrote the following after microbiology had given solution to the etiology of most acute infections of the central nervous system and after fungi and bacteria had been incriminated in important chronic disorders of the nervous system such as torula and tuberculosis meningitis we have been left in neurology with a wide range of subacute and chronic affections of the central nervous systems of unknown etiology some of these diseases still listed as idiopathic are among the most prevalent afflictions of the central nervous system many others with familial patterns of occurrence do not yet have their basic pathogenesis or underlying metabolic defect elucidated although we tend to think of them as genetically mediated

Prions in Humans and Animals 2009-05-08

this comprehensive work aimed at both students and researchers alike systematically covers all aspects of prion diseases transmissible spongiform encephalopathies from their history microbiology and pathology to their transmissibility and prevention the book describes diseases such as creutzfeldt jakob disease kuru mad cow disease bse chronic wasting disease and scrapie highlighting their biochemical molecular biological genetic and clinical aspects a detailed presentation of the impact of prion diseases in fields such as pharmaceuticals blood products disinfection surgical instruments and epidemiology concludes with a discussion of preventive measures a renowned editorial team representing the fields of medicine veterinary medicine and molecular biology brought together 80 internationally respected authors for this translation and new edition of the successful german publication not only from relevant research fields but also from industry and public health institutions the book includes chapters by among many other notable scientists william j hadlow who discovered the relationship between the human and animal forms of prion diseases and michael p alpers with 45 years of experience in papua new guinea investigating the first known human epidemic form kuru transmitted by endocannibalism further contributions from gerald a h wells a veterinary pathologist who described bse and recognised its similarity to scrapie thus recording the first cases in 1986 of the most important animal epidemic of modern times and robert g will a medical neurologist and epidemiologist who discovered the emergence of the variant form of creutzfeldt jakob disease in 1996 underscore the strength of this author team carefully

edited with numerous illustrations this work offers a systematic approach committed to a clear presentation of the current knowledge of prion diseases it aims to inspire and stimulate interdisciplinary cooperation innovative research ideas and effective prevention

□□ **2006**

there is an acceleration in prion disease research because of the spread of mad cow disease this book covers in vitro cellular and animal models adapted for the study of tses includes bio safety procedures

Techniques in Prion Research 2013-12-01

a collection of the nobel lectures delivered by the prizewinners in physiology or medicine for the period 1996 2000 each lecture is based on the work for which the laureate was awarded the prize the following is a list of the nobel laureates during 1996 2000 with a description of the works that won them their prizes p c doherty and r m zinkernagel 1996 for their discoveries concerning the specificity of the cell mediated immune defence s b prusiner 1997 for his discovery of prions a new biological principle of infection r f furchgott l j ignarro and f murad 1998 for their discoveries concerning nitric oxide as a signalling molecule in the cardiovascular system g blobel 1999 for the discovery that proteins have intrinsic signals that govern their transport and localization in the cell a carlsson p greengard and e r kandel 2000 for their discoveries concerning signal

transduction in the nervous system

Physiology Or Medicine, 1996-2000 2003

the journal accounting history was published in eight volumes intermittently between 1976 and 1986 it had a relatively small circulation and this re issue of its anthology provides the opportunity for many of the articles which appeared in the journal over the years to once again reach a wider audience the volume begins with items of a general nature covering the importance of preserving accounting records and accounting history in general subsequent categories deal with the methodology of historical accounting research government accounting taxation bankruptcy professional accountancy and accounting theory as well as auditing and management accounting

Accounting History 1976-1986 (RLE Accounting) 2013-12-04

in the past decades the public has been forced to revise its perception of the apparent triumph of modern hygiene and medical microbiology over infectious diseases not only have older infections reemerged but new epidemics like aids have lead to public uncertainty with the onset of the bovine spongiform encephalopathy epidemic in great britain novel infectious agents came into the public spotlight ones that do not cause

classical inflammation but a slow and irreversible degeneration of the central nervous system. From a scientific point of view, these agents called proteinaceous infectious organisms or prions were shown to be self-replicating without nucleic acid sequences to encode genomic information. In this volume, leading scientists deal with the medical, scientific, and public health questions that prion infections raise. Besides the prion or virus discussion, the structures of prions and their molecular biological analysis, as well as the questions of strain variations and species barrier, are presented. The etiological, clinical, and diagnostic aspects of transmissible spongiform encephalopathies are given special attention. The epidemiology of human and animal prion diseases, disease management, and possibilities for inactivation of prions are discussed from a public health perspective directed at scientists, physicians, and the public health sector. The monograph uses a multidisciplinary approach to present the latest findings on prion infection.

Prions 2000-12-31

Inside the third edition of this reference, the reader will find thorough and authoritative discussions of all of these developments and their implications for clinical practice. It includes a major new section on psychiatric diseases, descriptions of the molecular and genetic basis of the spongiform encephalopathies, as well as the expression of the prion gene under physiologic and pathologic conditions. Additional coverage examines the human genome project and neurologic disease and coverage on Alzheimer's disease and related dementias.

The Molecular and Genetic Basis of Neurologic and Psychiatric Disease 2003

infectious diseases of wild mammals third edition presents the latest information on the diagnosis and treatment of infectious disease in both free ranging and captive wild mammals editors elizabeth williams and ian barker have recruited 71 contributors all noted experts in their fields to update this new edition this reference provides valuable information on each disease including etiology history distribution epidemiology clinical signs pathology immunity diagnosis treatment control this latest edition is a leading reference book for wildlife biologists managers and rehabilitators biology students conservationists public health workers

Infectious Diseases of Wild Mammals 2008-02-28

bovine spongiform encephalopathy bse has become the most publicly recognizable example of a group of fatal neurodegenerative diseases caused by proteinaceous infectious particles called prions the contributors to this volume all internationally recognized experts in their fields provide an introduction to prion biology followed by reviews of the latest information on bse vcjd and chronic wasting disease an animal prion disease that has recently emerged in north america

Emerging Infectious Diseases 2004

this volume contains 81 chapters that relate to veterinary and bacterial virology the first section describes general features of farm and other animals of agricultural importance the following three sections detail other animal viruses avian viruses and viruses affecting aquatic species such as fish and crustaceans the section five deals with viruses which infect bacteria the most comprehensive single volume source providing an overview of virology issues related to animal and bacteria bridges the gap between basic undergraduate texts and specialized reviews concise and general overviews of important topics within the field will help in preparation of lectures writing reports or drafting grant applications

Mad Cow Disease and Related Spongiform Encephalopathies 2004-03-18

globalization an inevitable phenomenon in human history has been bringing the world closer through exchange of goods and services advancements in information communication technologies icts global diffusion of technologies and cultural awareness recent developments and trends within the global business arena present managers with challenging situations competing in the twenty first century and beyond requires firms to invest in the increasingly refined managerial skills needed to perform effectively in a

multicultural business environment global companies are faced with varied and dynamic environments in which they must accurately assess the political legal technological ethical and cultural factors that shape their strategies and operations the success of a company s global operation often depends significantly on the manager s cultural skills as well as the ability to carry out the company s strategy within the context of the host country s business practices while globalization is a vehicle for and a consequence of human progress it is also a confused process that requires change the change process presents the manager with challenging strategic options globalization of business theories and strategies for tomorrow s managers addresses the above challenges it offers managers and business students strategies on how to become globally competitive in a complex international management environment contributors to the volume offer their insights into the issues every global manager needs to understand such as the nature of the global business environment entry mode choice global strategic positioning global human resource management human rights and ethical issues the book covers general as well as specific topics including assumptions theories and practices of globalization it is expected that the book will enable business students managers and corporate leaders to avoid common drawbacks in their quest to build a successful global firm that will benefit all

most of the world's experts on prions met for a workshop in erice in august 1996 the aim of the workshop was to discuss the fundamentals of the science of prions it was fortunate that so many could be present given the pressure that they were under because of the data presented in march 1996 indicating that bovine spongiform encephalopathy bse or mad cow disease had penetrated the species barrier and was beginning to cause a new disease in humans the new variant of creutzfeldt jakob disease nvjd this important and urgent subject became an additional major topic at the workshop this is a book containing most of the talks plus the abstracts of those unable to find time to write up their talks almost all papers were written in the spring and summer of 1997 and contain material added after the workshop thus bob will's paper on the new variant of cm contains data up to july 1997 and four contributions arrived in october 1997 in addition to the talks given at our workshop there was a special joint session with the planetary emergencies workshop where many distinguished scientists including three nobel laureates discussed major issues affecting our planet six talks were given by us to this other workshop five about prions bse and nvjd and one on the broader issue of new epidemics by luc montagnier although most of the talks concerned research issues there were a few special talks

Globalization of Business 2008-10-30

zoonotic viruses of northern eurasia taxonomy and ecology provides a review of modern data of the taxonomy distribution and ecology of zoonotic viruses in the ecosystems of northern eurasia with climate changes increasing population density of arthropod vectors and vertebrate hosts development of unused lands transferences of viruses by birds bats infected humans and animals vectors allow virus populations to adapt to the new environment this leads to the appearance of emerging or re emerging infections this book presents data about circulation and evolution of influenza viruses tick borne encephalitis virus west nile virus crimean congo hemorrhagic fever virus hantaviruses sindbis virus california encephalitis group viruses and other pathogenic viruses as well as of novel viruses classified for the first time using next generation sequence features summarized data about the circulation of approximately 80 viruses isolated in natural foci of northern eurasia provides descriptions of the main ecosystems of northern eurasia in the context of the ecology of viruses with environmental factors delineates the potential impact of climate change for the distribution of viruses includes virus taxonomy ecology distribution and pathogenicity for humans and animals

Prions and Brain Diseases in Animals and Humans

1998-03-31

the second volume continues to fill the gap in protein review and protocol literature it does this while summarizing recent achievements in the understanding of the relationships between protein misfoldings aggregation and development of protein deposition disorders the focus of part b is the molecular basis of differential disorders

FDA Veterinarian 1996

published since 1959 international review of neurobiology is a well known series appealing to neuroscientists clinicians psychologists physiologists and pharmacologists led by an internationally renowned editorial board this important serial publishes both eclectic volumes made up of timely reviews and thematic volumes that focus on recent progress in a specific area of neurobiology research

Zoonotic Viruses of Northern Eurasia 2015-05-25

progress in the molecular analysis of genetic susceptibility to human and animal infectious diseases has been very rapid over the last few years several genes involved in resistance to hiv aids tuberculosis malaria viral hepatitis herpesvirus infections prion diseases and several others have now been identified and their functions have partly or completely been

elucidated this book covers the most recent advances in the field and explores how progress in knowing the genetic basis of infectious diseases could lead to new insights into understanding and combating them book jacket

Protein Misfolding, Aggregation and Conformational Diseases 2007-05-26

prion protein volume 150 the latest volume in the progress in molecular biology and translational science series focuses on prion protein a protein that is considered to be the archetype of intrinsically disordered proteins this updated volume includes comprehensive sections on a variety of timely topics including functions of prion protein copper and prion protein cell biology of prion protein structural studies of prion proteins molecular simulations on wild type and mutant prion proteins genetics of prion protein the prion concept and synthetic prions and transgenic mouse models as neurodegenerative diseases represent a health issue that is receiving increasing attention from the scientific community due to their social and economic impact this series is an ideal resource for the latest research in molecular biology and translational science presents the latest volume in the progress in molecular biology and translational science series accessible to students and researcher alike written by leading authorities in the field of prion protein

Ascent to the Zenith was Magnificent, Denouement was a Bit Difficult 1996

this conference dedicated to the etiology and treatment of motility disorders in spermatozoa and male sterility attracted some of the finest investigators in the field standards were immensely high throughout and discussions were meaningful and detailed analyses on disorders in sperm motility demand a broad based approach involving cytologists geneticists andrologists and embryologists because the topic has many clinical and scientific overtones human spermatozoa are at the mercy of so many factors as they form and mature in the testis and epididymis their survival and fundamental characteristics are essential for fertilization and the male genome imposes its influence on the embryo as it becomes active in male pronuclei very soon after sperm entry into the oocyte all of these fundamental aspects of sperm biology demanded a broad breadth of topics in the symposium the opening session quickly got down to fundamentals with contributions from j l gatti j g alvarez c gagnon and h breitbart they discussed the mechanism and regulation of motility the metabolic strategy of human spermatozoa the effects of exogenous factors such as antibodies infections and toxins and finally the role of intracellular calcium on sperm motility to these topics the postcoffee session on the first morning described the genetics of motility disorders and the etiology and management of necrozoospermia the excellent presentation provided the background detail of the symposium and opened the way for the discussion of various clinical aspects of the topic

International Review of Neurobiology 2005-04-04

the young investigator with an idea has to negotiate many institutional federal and industrial challenges in order to get a product to market nowhere is described the steps in the development of new drugs diagnosis or devices the person with an idea has nowhere to turn for information and details the young investigator may understand the elements of basic and clinical research but ordinarily has no insight into novel ways of finding research funding or how to explore to find the funding opportunities that are available the young investigator has little knowledge of the mechanisms to bring an idea through the developmental phases to the market there are other players in this complex endeavor with whom he or she has no contact including those from industry the food and drug administration and the legal community exposure to the philosophy of product development and to procedural information would be useful to the scientific community as would contact with those who have successfully taken an idea to a finished product a first attempt to do this was the symposium on idea to product the process sponsored by serono symposia usa and held november 17 to 20 1994 in washington d c this book comprises the proceedings of that meeting the editors are indebted to the many contributors to this volume and we are especially grateful to serono symposia usa and to leslie nies and her staff for their expertise in organizing the symposium

Genetics of Infectious Disease Susceptibility

2001-07-31

here the editor rogerio lobo has assembled an internationally recognized group of reproductive endocrinologists to address perimenopause the time both before and after the last menses and its attendant decline in ovarian function as well as the clinical issues and therapeutic options for women during this period

Prion Protein 2017-08-22

amyloid forming proteins are implicated in over 30 human diseases the proteins involved in each disease have unrelated sequences and dissimilar native structures but they all undergo conformational alterations to form fibrillar polymers the fibrillar assemblies accumulate progressively into disease specific lesions in vivo substantial evidence suggests these lesions are the end state of aberrant protein folding whereas the actual disease causing culprits likely are soluble non fibrillar assemblies preceding the aggregates the non fibrillar protein assemblies range from small low order oligomers to spherical annular and protofibrillar species oligomeric species are believed to mediate various pathogenic mechanisms that lead to cellular dysfunction cytotoxicity and cell loss eventuating in disease specific degeneration and systemic morbidity the particular pathologies thus are determined by the afflicted cell types organs systems and the

proteins involved evidence suggests that the oligomeric species may share structural features and possibly common mechanisms of action in many cases the structure function interrelationships amongst the various protein assemblies described in vitro are still elusive deciphering these intricate structure function correlations will help understanding a complex array of pathogenic mechanisms some of which may be common across different diseases albeit affecting different cell types and systems

Male Sterility and Motility Disorders 2012-12-06

over the past half century the central dogma in which dna makes rna makes protein has dominated thinking in biology with continuing refinements in understanding of dna inheritance gene expression and macromolecular interactions however we have also witnessed the elucidation of epigenetic phenomena that violate conventional notions of inheritance protein only inheritance involves the transmission of phenotypes by self perpetuating changes in protein conformation proteins that constitute chromatin can also transmit heritable information for example via posttranslational modifications of histones both the transmission of phenotypes via the formation of protein conformations and the inheritance of chromatin states involve self perpetuating assemblies of proteins and there is evidence for some common structural features and conceptual frameworks between them to foster interactions between researchers in these two fields the national academy of sciences convened an arthur m sackler colloquium entitled self perpetuating structural states in biology disease and genetics in washington dc on march 22 24 2002 participants

described new phenomenology and provided insights into fundamental mechanisms of protein and chromatin inheritance perhaps most surprising to attendees was emerging evidence that these unconventional modes of inheritance may be common

Idea to Product *2012-12-06*

this volume contains the proceedings of the international symposium on embryo implantation molecular cellular and clinical aspects held from october 3 6 1997 in newport beach california internationally recognized experts discuss the development and future of human in vitro fertilization and embryo implantation the cellular aspects of implantation hormonal regulation molecular markers of receptivity trophoblast factors primate models and animal studies and transcriptional regulation of maternal fetal recognition

Perimenopause *2012-12-06*

the aim of this symposium was to provide basic and clinical investigators with the latest information on the biology of wound healing and tissue repair written and edited by eminent experts in the field the papers cover the general concepts of wound healing the role of nutrients endogenous growth factors clinical applications of growth hormone and igf 1 therapy and clinical applications of peptide growth factors

Non-fibrillar Amyloidogenic Protein Assemblies - Common Cytotoxins Underlying Degenerative Diseases 2012-01-13

this volume is the proceedings of the international conference on inhibin activin recent advances and future views held in tokushima japan from november 9 10 1996 the internationally recognized faculty present the latest research in the exploration of inhibin activin and follistatin mechanisms of action

Self-Perpetuating Structural States in Biology, Disease, and Genetics 2002

sex steroid interactions with growth hormone presents the proceedings of an international symposium held from october 22 25 in naples florida the proceedings provide new insights and concepts gained by molecular cellular and neuroendocrine research into mechanistic interactions of the reproductive and somatotrophic axes chapters include discussions of the impact of sex steroids on growth hormone secretion in both children and adults sex steroids growth hormone releasing factor and somatostatin how sex steroids modulate growth hormone action on target issues and differential effects of growth hormone secretagogues in men and women this volume is designed for physicians scientists and

other health professionals interested or trained in clinical and basic endocrinology growth or reproduction

Embryo Implantation 2013-04-17

changes in the allocation of healthcare resources have raised issues related to the efficacy and outcomes of medical therapy and how such factors may be measured the questions associated with the quality of life and functional capability of patients with chronic health conditions have been of special interest endocrine disorders have the potential for disrupting the general health and well being of affected individuals and their families thus they warrant serious attention this symposium was convened in november 1997 at palm beach gardens florida to bring together medical behavioral and social scientists the meeting fostered the presentation and discussion of the most current clinical research on the effects of various therapies on a wide range of endocrine disorders from diabetes to adrenal insufficiency and growth hormone deficiency the participants all noted national and international experts in their fields focused their attention on both the biomedical value and effectiveness of treatment as well as on the impact such treatments have on psychological states such as mood and cognition many presentations specifically emphasized the quality of life qol indicators that now regularly appear in many research protocols and reports the pioneering work of two clinical researchers was a major highlight of the meeting and an award of recognition was presented to robert blizzard m d and john money ph d for their innovative and insightful work in pediatric endocrinology

and psychosexual development

Growth Factors and Wound Healing 2012-12-06

the field of human artificial reproductive technology art is continually advancing and has witnessed significant changes since the inception of Louise Brown in 1978 though Louise Brown herself was conceived after the transfer of a blastocyst there remain significant confusion and debate regarding the stage at which the human embryo conceived in the laboratory should be replaced in the mother developments in culture media formulations leading to the introduction of sequential media have brought the role of the blastocyst in human art back into the spotlight it was due to this resurgence of interest in the niche of extended culture in human infertility treatment that the symposium on art and the human blastocyst was held of this meeting within this volume bring to the forefront the proceedings the main issues raised with the transfer of embryos at the blastocyst stage it is evident from the chapters that follow that art needs to be perceived as a continuum of procedures each one dependent on the preceding one and all equally as important as each other that is to say the development of a competent embryo is ultimately dependent on the quality of the gametes from which it was derived with regard to the oocyte this then places the emphasis on the physician to use a stimulation protocol that both produces quality oocytes and does not impair endometrial function maintenance of gamete and embryo quality is the laboratory's role

Inhibin, Activin and Follistatin *2012-12-06*

ovulation evolving scientific and clinical concepts presents the proceedings of the international symposium on ovulation evolving scientific and clinical concepts held in salt lake city utah internationally recognized experts provide new insights in the most recent developments in the area of mammalian ovulation incorporating basic scientific and clinical concepts in the process topics include an overview of 37 years of research on ovulation the follicle the gonadotropin surge the intraovarian steroid microenvironment putative periovulatory intraovarian regulators and messengers and clinical frontiers more than 80 illustrations round out the text the book is essential for all reproductive endocrinologists and ob gyns

Sex-Steroid Interactions with Growth Hormone *2012-12-06*

the term polycystic ovary syndrome peos is meant to describe a clinical endocrinopathy characterized by menstrual irregularity and evidence of hyperandrogenism while recognized since the 1800s a clinical composite was not constructed until 1935 when stein and leventhal reported their findings of seven women with infertility menstrual dysfunction hirsutism and enlarged ovaries notably the ovaries contained numerous multiple cysts and the ovarian capsule was thickened at the time this preciseness of

definition was sufficient to entitle the entity Stein-Leventhal syndrome subsequently over the intervening years as investigators attempted to unravel the pathophysiology and genesis of this disorder and the number of reported studies increased there ensued a gradual and distinct terminologic conversion to polycystic ovary syndrome which whether intentional or not connoted a less well defined condition perhaps this is appropriately so given the seemingly broadening spectrum of clinical presentations and the continuing debate over what constitutes PCOS the expansive new knowledge about PCOS was discussed to a significant degree at an international symposium organized by Sero Symposia USA and held in Boston in the late spring of 1995 ovarian physiology including the fate of the follicular unit was a central focus with several presentations on the genesis growth and death of ovarian cellular components a discussion of the regulation of ovarian cell function was also highlighted and comprised a major portion of the program

Therapeutic Outcome of Endocrine Disorders

2012-12-06

transmissible spongiform encephalopathies (TSE) known as prion diseases have been recognized for nearly 300 years in animals and almost 100 years in humans modern studies including the protein misfolding cyclic amplification (PMCA) have greatly advanced our understanding of the pathogenesis of prion diseases and facilitated the identification of new prion diseases in animals and humans in the second edition of *Prions and Diseases*

more than 60 leading researchers and clinicians worldwide provide an up to date discussion of these unique infectious pathogens and their associated diseases the book provides up to date knowledge about the etiology pathogenesis classification histopathological and clinical aspects of the full range of animal and human prion diseases as a result the book contains by far the most authoritative views about the past present and future of prions and prion diseases the new second edition covers such important emerging topics such as inherited human prion disease stem cell models in prion research human prion disease surveillance and gene therapy strategies

ART and the Human Blastocyst 2012-12-06

calculating political risk is rich and illuminating and much more than a political science treatise althaus draws on diverse literature extensive interviews and intriguing case studies to offer interdisciplinary practical and nuanced insight this book provides new perspectives and more precise language for making sense of a critical dimension of politics policy making and public management evert lindquist director and professor school of public administration university of victoria canada this powerful new book is the first ever examination of the hard edge of how political risk something faced by all political actors innumerable times every day is calculated and used in decision making it opens with an outline of the historical and linguistic origins of risk the various disciplinary understandings of risk the risk society concept and how risk has come to be so prominent in the context of environmental disaster and terrorism the book then defines political risk

and looks at its manifestations in the public sector from project to high level political risk it also looks at risk identification versus risk management and compares the concept of political risk with the private sector practice of risk management unique research findings from interviews with over 100 risk practitioners and politicians provide a detailed look at how political actors calculate political risk case study based chapters look in depth at neat and discrete examples risk calculation in state development plans in australia political risk identification and management in the uk during the mad cow crisis and us government risk calculation in the post september 11 context the final chapters draw together the experiences and lessons learned from the case studies and practitioner insights to formulate a better understanding of what political risk is and what its calculation means in political practice the author shows how political risk calculation provides a fresh perspective on policy analysis and identifies how political risk is relevant to a broader understanding of politics and political science as well as policy formulation and implementation on the ground

Ovulation 2013-11-11

human prion diseases volume 153 is designed to update the reader on the latest advances and clinical aspects of prion diseases the book is organized into five sections including the pathophysiology of prions and a description of animal and human diseases this is followed by detailed reports on recent advances in diagnosis strategies for the development of novel anti prion molecules and possible designs of clinical trials in such a rare disease an

introductory chapter gives an extensive historical background of prion research with a final chapter highlighting recent progress and more importantly unsolved problems offers an authoritative overview of prion diseases in humans detailing the pathogenesis of the disease clinical investigations and the diagnosis of both the genetic and acquired forms provides clarity and context by presenting prion diseases in relation to other neurodegenerative diseases in humans emphasizes the unique properties of prion diseases and consequent problems they can cause both clinically and in public health terms
