research and teaching since the 1920s an endless flow of studies has analyzed the political systems of fascism these seizure of power the nature of the regimes the atrocities committed and finally the wars waged against other countries however much less attention has been paid to the strategies of persuasion employed by the regimes to win over the masses for their cause among these fascist propaganda has traditionally been seen as the key means of influencing public opinion only recently has the fascination with fascism become a topic of enquiry that has also formed the guiding interest of this volume it offers for the first time a comparative analysis of the forms and functions of theater in countries governed by fascist or para fascist regimes by examining a wide spectrum of theatrical manifestations in a number of states with a varying degree of fascistization these studies establish some of the similarities and differences between the theatrical cultures of several cultures in the interwar period field theory is a powerful and growing paradigm within psychoanalysis but has previously been split between various schools of thought with little overlap in this book a distinguished group of contributors from across all perspectives on field theory examine its uniting factors and set out future developments and directions for the paradigm within psychoanalysis advances in contemporary psychoanalytic field theory represents the work developed for the first international meeting of the international field theory association founded in 2015 to offer a community for those interested in psychoanalytic field theory and promote its understanding and further development ifta recognizes all models of psychoanalytic field theory and seeks to foster communication amongst psychoanalysts working in different models languages and parts of the world at the first ever meeting of ifta an international group of psychoanalysts participated in a roundtable discussion of the different contemporary models of psychoanalytic field theory each participant wrote a paper in advance of the meeting which were all shared among the group beforehand and then discussed together these feature as the chapters in this volume whilst a thirteenth member offers a unifying overview of all the papers each chapter provides new contemporary ways of approaching field theory key excerpts from the discussion of the meeting are also featured throughout to give a flavour of the collaborative efforts of the participants the emphasis of this book is on generating mutual understanding of the different models of field theory their underlying concepts and heuristic principles drawing on insights from literature critical theory and philosophy as well as psychoanalysis this book sets out a program for the future of field theory advances in contemporary psychoanalytic field theory will appeal to psychoanalysts and mental health care practitioners as well as academicians in philosophy psychology and literature collision or interaction induced spectroscopy refers to radiative transitions which are forbidden in free atoms or molecules but which occur in clusters of interacting atoms or molecules the most common phenomena are induced absorption in the infrared region and induced light scattering which involves inelastic scattering of visible laser light the particle interactions giving rise to the necessary induced dipole moments and polarizabilities are modelled at long range by multipole expansions at short range electron overlap and exchange mechanisms come into play information on atomic and molecular interactions and dynamics in dense media on a picosecond timescale may be drawn from the spectra collision induced absorption in the infrared was discovered at the university of toronto in 1949 by Crawford Welsh and Locke who studied liquid oxygen and nitrogen through the 1950s and 1960s experimental elucidation of the phenomenon particularly in gases continued and theoretical underpinnings were established in the late 1960s the related phenomenon of collision induced light scattering was first observed in compressed inert gases in 1978 an Enrico Fermi summer school was held at Varenna Italy under the directorship of J. Van Kranendonk the lectures there reviewed activity from the previous two decades during which the approach to the subject had not changed greatly in 1983 a highly successful NATO advanced research workshop was held

at bonas france under the directorship of g birnbaum an important outcome of that meeting was the demonstration of the maturity and sophistication of current experimental and theoretical techniques the papers in this volume comprise the refereed proceedings of the conference artificial intelligence in theory and practice ifip ai 2006 which formed part of the 19th world computer congress of ifip the international federation for information processing wcc 2006 in santiago chile in august 2006 the conference is organised by the ifip technical committee on artificial intelligence technical committee 12 and its working group 12 5 artificial intelligence applications all papers were reviewed by at least two members of our programme committee the best papers were selected for the conference and are included in this volume the international nature of ifip is amply reflected in the large number of countries represented here the conference featured invited talks by rose dieng john atkinson john debenham and myself ifip ai 2006 also included the second ifip symposium on professional practice in artificial intelligence organised by professor john debenham which ran alongside the refereed papers i should like to thank the conference chair professor debenham for all his efforts in organising the symposium and the members of our programme committee for reviewing an unexpectedly large number of papers to a very tight deadline this is the latest in a series of conferences organised by ifip technical committee 12 dedicated to the techniques of artificial intelligence and their real world applications the wide range and importance of these applications is clearly indicated by the papers in this volume further information about tci 2 can be found on our website ifiptcl2 org this book sets out to present kant as a theological thinker his critical philosophy was not only destructive of natural theology with its attempt to prove divine existence by logical argument it also left no room for revelation in the traditional sense yet kant himself who was brought up in lutheran pietism certainly believed in god and could fairly be described as a religious man but he held that religion can be based only on the moral consciousness and in his last major work religion within the limits of reason alone discussed here in detail he interpreted christianity purely in terms of moral symbolism it would be no exaggeration to claim that kant s influence has been decisive for modern theology

collision or interaction induced spectroscopy refers to radiative transitions which are forbidden in free atoms or molecules but which occur in clusters of interacting atoms or molecules the most common phenomena are induced absorption in the infrared region and induced light scattering which involves inelastic scattering of visible laser light the particle interactions giving rise to the necessary induced dipole moments and polarizabilities are modelled at long range by multipole expansions at short range electron overlap and exchange mechanisms come into play information on atomic and molecular interactions and dynamics in dense media on a picosecond timescale may be drawn from the spectra collision induced absorption in the infrared was discovered at the university of toronto in 1949 by

this book sets out to present kant as a theological thinker his critical philosophy was not only destructive of natural theology with its attempt to prove divine existence by logical argument it also left no room for revelation in the traditional sense yet kant himself who was brought up in lutheran pietism certainly believed in god and could fairly be described as a religious man but he held that religion can be based only on the moral consciousness and in his last major work religion within the limits of reason alone discussed here in detail he interpreted christianity

purely in terms of moral symbolism it would be no exaggeration to claim that Kant's influence has been decisive for modern theology
