techniques in protein nmr under the biological magnetic resonance series volume 16 with the subtitle modern techniques in protein nmr is the first in this series these two volumes present some of the recent significant advances in the biomolecular nmr field with emphasis on developments during the last five years we are honored to have brought together in these volume some of the world s foremost experts who have provided broad leadership in advancing this field volume 16 contains vances in two broad categories i large proteins complexes and membrane proteins and ii pulse methods volume 17 contains major advances in i com tational methods and ii structure and dynamics the opening chapter of volume 17 starts with a consideration of some important aspects of modeling from spectroscopic and diffraction data by wilfred van gunsteren and his colleagues the next two chapters deal with combined automated assignments and protein structure determination an area of intense research in many laboratories since the traditional manual methods are often inadequate or laborious in handling large volumes of nmr data on large proteins first werner braun and his associates describe their experience with the noah diamod protocol developed in their laboratory
