to those who have made a study of the literature and who have learned by practice and experience the methods and their limitations the various surgical text books give but a very superficial knowledge of local anesthesia whereas the special monographs as a rule overestimate the value of one particular method many monographs have appeared in recent years which have simplified the technique they have shown that the indiscriminate use of any particular method is not permissible that nearly every operation every tissue in fact every part of the body requires a particular technique for anesthesia and that operations can only be carried out under this method after a most careful study of the innervation of the operative field about the publisher forgotten books publishes hundreds of thousands of
