section to help identify specific problems tips that give valuable short cuts to make the job easier and eliminate the need for special tools notes cautions and warnings for the home mechanic color spark plug diagnosis and an easy to use index blood highways is the heart wrenching account of the biggest product liability case in history the ford firestone fiasco at the center of the story are two people tab turner a charismatic trial attorney from arkansas who has made a career out of forcing ford and other automakers to own up to knowingly trade human lives for profits and donna bailey a single mother and outdoor enthusiast who fought back from the brink of death to confront those ultimately responsible for her accident weaving together harrowing depictions of the accidents and their consequences with the stories of the men and women who labor to police the auto industry and its reckless cost cutting blood highways will transform the way you view corporations the government the courts and the media above all this book shows the price the public pays in wrecked and mangled lives when companies focus more on shaving costs than making quality products this major research study provides a fresh critical look at the way automobile electronics are and should be built written by silicon valley pioneer john hall this book is based on his nearly 40 years of experience in developing and producing semiconductors for the automobile industry and other customers highly readable and comprehensible for even beginning students of electronics and semiconductor design this volume provides an in depth explanation of the factors to be considered when building vehicle systems starting with a concise history of vehicle electronics hall walks the reader through the environmental conditions faced by these systems and the variety of failure mechanisms that can occur basic and advanced semiconductor issues raised by vehicle implementation are then discussed in detail a wide range of issues confronting designers from over marketing of risky features to time and cost constraints are explained complex electronic modules from many different manufacturers are examined and discussed as real world case studies of good and bad design techniques hall concludes by providing design recommendations that will allow vehicle electronics system developers to build much tougher devices at little or no incremental production cost this book is the first major work to focus on key issues emerging as major causes of safety and performance problems vehicle makers increasingly seek market advantages by providing ever more capable electronics in their products while these features add much value to vehicles they fail in ways that are beyond the experience and comprehension of most technicians and accident investigators by combining decades of design experience and innovation with extensive research hall has produced unique insights and explanations so engineers can prevent most or perhaps all of these problems john hall is one of silicon valley s most prolific independent pioneers and inventors he founded union carbide s semi conductor operation in 1962 he is a founder of interstil and micro power systems he is the inventor of the first electronic watch first lcd digital watch first cmos liquid crystal display hand held calculator color autofocus cameras among many successful commercial products he has worked

for many american and foreign automakers on specific projects such as integrated two way radios and seat belt interlocks he is working with dod on hardening electronics systems against non nuclear events
