this book sets out to provide the theoretical foundations that will enable radio network planners to plan model and optimize radio networks using state of the art findings from around the globe it adopts a logical approach beginning with the background to the present status of umts radio network technology before devoting equal coverage to planning modelling and optimization issues all key planning areas are covered including the technical and legal implications of network infrastructure sharing hierarchical cell structure hcs deployment ultra high site deployment and the benefits and limitations of using computer aided design cad software theoretical models for umts technology are explained as generic system models stand alone services and mixed services business modelling theory and methods are put forward taking in propagation calculations link level umts static and umts dynamic simulations the challenges and goals of the automated optimization process are explored in depth using cutting edge cost function and optimization algorithms this theory based resource containing prolific illustrative case studies explains the reasons for umts radio networks performance issues and how to use this foundational knowledge to model plan and optimize present and future systems

a highly practical guide rooted in theory to include the necessary background for taking the reader through the planning implementation and management stages for each type of cellular network present day cellular networks are a mixture of the technologies like gsm egprs and wcdma they even contain features of the technologies that will lead us to the fourth generation networks designing and optimising these complex networks requires much deeper understanding advanced cellular network planning and optimisation presents radio transmission and core network planning and optimisation aspects for gsm egprs and wcdma networks with focus on

practical aspects of the field experts from each of the domains have brought their experiences under one book making it an essential read for design practitioners experts scientists and students working in the cellular industry key highlights focus on radio transmission and core network planning and optimisation covers gsm egprs wcdma network planning optimisation gives an introduction to the networks technologies beyond wcdma and explores its current status and future potential examines the full range of potential scenarios and problems faced by those who design cellular networks and provides advice and solutions all backed up with real world examples this text will serve as a handbook to anyone engaged in the design deployment performance and business of cellular networks efficient planning and optimization of mobile networks are key to guarantee superior quality of service and user experience they also form the essential foundation for the success of future technology development making this book a valuable read on the road towards 4g tero ojanperä chief technology officer nokia networks
