Engineering the Future 1997 an account of conflicts within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history in the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change the engineers were fighting to remake their profession challenging their fellow engineers to embrace a more humane vision of technology in engineers for change matthew wisnioski offers an account of this conflict within engineering linking it to deep seated assumptions about technology and american life the postwar period in america saw a near utopian belief in technology s beneficence beginning in the mid 1960s however society influenced by the antitechnology writings of such thinkers as jacques ellul and lewis mumford began to view technology in a more negative light engineers themselves were seen as conformist organization men propping up the military industrial complex a dissident minority of engineers offered critiques of their profession that appropriated concepts from technology s critics these dissidents were criticized in turn by conservatives who regarded them as countercultural luddites and yet as wisnioski shows the radical minority spurred the professional elite to promote a new understanding of technology as a rapidly accelerating force that our institutions are ill equipped to handle the negative consequences of technology spring from its very nature and not from engineering s failures sociotechnologists were recruited to help society adjust to its technology wisnioski argues that in responding to the challenges posed by critics within their profession engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history

Introduction to Engineering Technology 2021-03-31 this co edited volume compares chinese and western experiences of engineering technology and development in doing so it builds a bridge between the east and west and advances a dialogue in the philosophy of engineering divided into three parts the book starts with studies on epistemological and ontological issues with a special focus on engineering design creativity management feasibility and sustainability part ii considers relationships between the history and philosophy of engineering and includes a general argument for the necessity of dialogue between history and philosophy it continues with a general introduction to traditional chinese attitudes toward engineering and technology and philosophical case studies of the chinese steel industry railroads and cybernetics in the soviet union part iii focuses on engineering ethics and society with chapters on engineering education and practice in china and the west the book s analyses of the interactions of science engineering ethics politics and policy in different societal contexts are of special interest the volume as a whole marks a new stage in the emergence of the philosophy of engineering as a new regionalization of philosophy this carefully edited interdisciplinary volume grew out of an international conference on the philosophy of engineering hosted by the university of the chinese academy of sciences in beijing it includes 30 contributions by

leading philosophers social scientists and engineers from australia china europe and the united states
