Directory of On-going Research in Smoking and Health

2012-12-06

the 1980s have seen a remarkable degree of public and professional acceptance of cigarette smoking as the most widespread and devastating form of drug dependence more medical schools now give required courses about drug dependence prestigious journals publish reports of investigations on the subject of nicotine dependence and more conferences and workshops are held each year on various aspects of nicotine dependence all this is in sharp contrast to the earlier prevailing atmosphere of disinterest ignorance or professional disdain these changes created an obvious place for a textbook oriented primarily toward the needs of clinicians working with patients who have nicotine dependence thus in preparation of this book most aspects of the management of nicotine dependence are incorporated in order to address concerns of physicians in training and other health care professionals across the world the final product which i believe to be comprehensive and clinically relevant throughout is a text that i hope will be of equal use to psychologists social workers nurses counselors and physicians in all specialties an encyclopedic treatise was deliberately avoided because that approach can be cumbersome in size readability and cost and for that reason readers will find little mention of data involving animal research nicotine related politics nicotine product advertising medical consequences of smoking psychotherapeutic techniques and the extent of the problem

The International Journal of the Addictions

1967

although research and practice in hypnosis has seen unprecedented expansion there has been a definite lack of inclusive and comprehensive surveys to aid the student and researcher this collection of original chapters written by leading experimental investigators is the first work to offer a current state of the art in hypnosis research a compendium of the historical background theories issues and trends in hypnosis this volume represents all major experimental viewpoints while providing a virtual who's who in the field of hypnosis the first two chapters written by the editors establish the current theoretical base of the field and review the historical background seventeen contributions focus directly on key aspects of present day hypnosis research these contributions are organized as surveys of broad topic areas descriptions in depth of individual investigator's programmatic lines of research and reports on research within specific areas especially those representing new viewpoints and holding promise for programmatic development a final chapter develops questions for future research offering an inclusive survey of the field from its historical inception to its current and predictive state this book presents many new ideas while updating established positions in research and theory the vital areas covered in connection with hypnosis

include psychophysiology creativity dreams imagination suggestibility simulator controls cognitive activity and ego psychological theory in addition there are chapters on hypnosis as a research method the measurement of altered states of consciousness and hypnotic programming techniques in psychological experiments hypnosis research developments and perspectives is written for researchers in hypnosis and clinical practitioners in medicine and psychology the book will serve as a basic text in all courses in hypnosis at the graduate level

The Everything Hypnosis Book

2017-11-29

how much of what we do is directed by conscious deliberate decisions and how much originates in unconscious automatic directives this is the question explored in the two of me via an engaging combination of phenomenological subjective investigation and objective considerations of mental processes and specific structures john birtchnell puts forward the thesis that many more of our actions than we might imagine are determined unconsciously not only are unnoticed automatic actions motivated unconsciously but also seemingly conscious or thought out behaviours are actually determined and reinforced by unconscious exigencies even where we produce a reasoned discourse taking responsibility for why we hold certain thoughts there is always the possibility that these explanations serve and follow from an unconscious driving force the conscious mind seems to act as spokesperson for both itself and the unconscious mind investigating this dual aspect of the person the book addresses the issue across a range of mental processes including memory language problem solving dreams delusions hallucinations and more complex constructs such as the arts humour and religion

Smoking and health: a report of the surgeon general

1979

this important book fills a need in the developing area of pain medicine it provides physicians with an up to date resource that details the current understanding about the basic science underlying the mechanism of action of the various cam therapies used for pain it summarizes the clinical evidence both for efficacy and safety and finishes with practical guidelines about how such treatments could be successfully and safely integrated into a pain practice

DHHS Publication No. (PHS).

2004-08-02

NIDA Research Monograph

2002-12

sustainable design has made great strides in recent years unfortunately it still falls short of fully integrating nature into our built environment through a groundbreaking new paradigm of restorative environmental design award winning author stephen r kellert proposes a new architectural model of sustainability in building for life kellert examines the fundamental interconnectedness of people and nature and how the loss of this connection results in a diminished quality of life this thoughtful new work illustrates how architects and designers can use simple methods to address our innate needs for contact with nature through the use of natural lighting ventilation and materials as well as more unexpected methodologies the use of metaphor perspective enticement and symbol architects can greatly enhance our daily lives these design techniques foster intellectual development relaxation and physical and emotional well being in the works of architects like frank lloyd wright eero saarinen cesar pelli norman foster and michael hopkins kellert sees the success of these strategies and presents models for moving forward ultimately kellert views our fractured relationship with nature as a design problem rather than an unavoidable aspect of modern life and he proposes many practical and creative solutions for cultivating a more rewarding experience of nature in our built environment

The Behavioral Aspects of Smoking

1954-01

eating disorders addictions and substance use disorders are each challenging in their own right but they also commonly co occur causing major challenges for clinicians this book presents cutting edge research on the overlap of these complex disorders and reviews integrative assessment strategies and treatment approaches including enhanced cognitive behavioral therapy dialectical behavior therapy abstinence approaches motivational enhancement mindfulness meditation and pharmacotherapy the issue of whether eating disordered behaviors such as dieting binge eating and excessive exercise are merely other forms of addictive behavior is examined the authors argue both for and against the concept of food addiction in research clinical treatment and public policy the book will be of interest to psychiatrists addiction medicine physicians mental health substance abuse clinicians dieticians researchers and those affected by the disorders

The Two of Me

2010-12-09

herbal and magical medicine draws on perspectives from folklore anthropology psychology medicine and botany to describe the traditional medical beliefs and practices among native anglo and african americans in eastern north carolina and virginia in documenting the vitality of such seemingly unusual healing traditions as talking the fire out of burns wart curing blood stopping herbal healing and rootwork the contributors to this volume demonstrate how the region s folk medical systems operate in

tandem with scientific biomedicine the authors provide illuminating commentary on the major forms of naturopathic and magico religious medicine practiced in the united states other essays explain the persistence of these traditions in our modern technological society and address the bases of folk medical concepts of illness and treatment and the efficacy of particular practices the collection suggests a model for collaborative research on traditional medicine that can be replicated in other parts of the country an extensive bibliography reveals the scope and variety of research in the field contributors karen baldwin richard blaustein linda camino edward m croom jr david hufford james w kirland peter lichstein holly f mathews robert sammons c w sullivan iii

Smoking and Health

1976

this book offers a general introduction to historical sources in the history of psychiatry delving into the range of sources that can be used to investigate this dynamic and exciting field the chapters in this volume deal with physical sources that might be encountered in the archive such as asylum casebooks artwork material artefacts post mortem records more general types of source including medical journals literature public enquiries and key themes within the field such as feminist sources activist and survivor sources offering practical advice and examples for the novice as well as insightful suggestions for the experienced scholar the authors provide worked through examples of how various source types can be used and exploited and reflect productively on the limits and constraints of different kinds of source material in so doing it presents readers with a comprehensive guide on how to read such sources to research and write the history of psychiatry methodically rigorous clear and accessible this is a vital reference for students just starting out within the field through to more experienced scholars experimenting with new and unfamiliar sources in the history of medicine and history of psychiatry more specifically chapters 4 8 9 10 and 13 of this book are available for free in pdf format as open access from the individual product page at routledge com they have been made available under a creative commons attribution non commercial no derivatives 4 0 license

Integrative Pain Medicine

1979

consciousness and the brain self regulation paradox the relationship of consciousness to biology has intrigued mankind throughout recorded history however little progress has been made not only in understanding these issues but also in raising fundamental questions central to the problem as davidson and davidson note in their introduction william james suggested almost a century ago in his principles of psychology that the brain was the organ of mind and behavior james went so far as to suggest that the remainder of the principles was but a footnote to this central thesis this volume brings together diverse biobehavioral scientists who are addressing the various aspects of the mind/brain/body/behavior issue although some of the authors have previously published together in other volumes by and large the particular combination of authors and topics selected by the editors makes this volume unique and timely unlike the consciousness and self regulation series schwartz shapiro 1976 1978 also published by plenum this volume is devoted entirely to a psychobiological approach to consciousness although readers will differ in their interest in specific chapters the well rounded investigator who is concerned with the psychobiology of consciousness will want to become intimately acquainted with all the views presented in this volume as noted by the individual contributors the topic of this volume stimulates fundamental questions which on the surface may appear trivial yet on further reflection turn out to have deep significance
