Dialogical Planning in a Fragmented Society 2018-02-06

the culmination of a critical study of neo pragmatism philosophy and its application to planning dialogical planning in a fragmented society begins with philosopher stanley m stein s examination of neo pragmatism and his thoughts on how it can be useful in the field of environmental design specifically how it can be applied to planning procedures and problems neo pragmatism is an approach that has been in the past best expressed or implied in the writing of hilary putnam richard rorty and in particular donald davidson john rawls and ludwig wittgenstein thomas l harper furthers this tradition by providing the context for this theoretical application from his academic background in economics and management as well as his practical experience with political decision making processes community planning and economic development the result is a fresh synthesis of ideas a new approach to thinking about planning theory and its implications for and relationship with practice philosopher michael walzer has asserted that philosophy reflects and articulates the political culture of its time and politics presents and enacts the arguments of philosophy similarly the authors view planning theory as planning reflected upon in tranquility away from the tumult of battle and planning practice as planning theory acted out in the confusion of the trenches each changes the other in a dynamic way and the authors demonstrate the intimate and inextricable link between them

how you think is how you plan is how you execute our professional lives have changed where once there were layers of middle managers they're long gone in their absence all professionals are now responsible for planning plans effort execution which has created an attendant problem most professionals are functionally trained e.g. marketing finance it and are accidental planners frequently ill prepared for planning the same efforts whose success depends on their functional contributions given that most professionals receive little training in modern planning practices is it sensible they are expected to create plans with maximum competency probably not since there isn't necessarily a relationship between functional skills and effort planning execution ability because of these limitations it is unfortunate that so many preventable problems with projects negatively impact well intentioned otherwise accomplished professionals in today's intense maximum pressure always on 7x24 work world professionals with planning responsibilities thrust upon them have a universal need for easy to learn and easy to use ways to design success in to planning plans and effort execution while driving cost time risk out plan on a page pop is an easy to learn proven solution for such problems it is systematic repeatable predictable using pop professionals apply substantiated practices that were built and refined by decades of success pop's introduction of planning system dynamics provides practitioner's with distinct professional advantages based on unparalleled insights and awareness into the otherwise baffling non-linear nature of planning choices and implications of changes the plan on a page starts with basics there are neither prerequisites nor ivory tower theories whether you're an old pro a newbie or somewhere in the middle in the plan on a page you'll discover and use a new way of thinking about planning plans effort execution that's proven by the harsh judge of decades of pragmatic use in silicon valley global financial institutions worldwide telecommunications carriers start-ups and many other similarly demanding environments tempered in these pressure-filled unforgiving settings the plan on a page has been used for decades by hundreds of professionals in dozens of countries to plan launch successfully execute thousands of efforts why is planning within one page important because if a plan doesn't work on one page it won't improve with length nor age learn the pop approach and you'll get going get done get results

our human capacity for planning agency plays central roles in the cross-temporal organization of our agency in our acting and thinking together both at a time and over time and in our self-governance both at a time and over time intentions can be understood as states in such a planning system the practical thinking at the bottom of this planning capacity is guided by norms that enjoin synchronic plan consistency and means-end coherence as well as forms of plan stability over time the essays in this book aim to deepen our understanding of these norms and to defend their status as norms of practical rationality for planning agents the general guidance by these planning norms has many pragmatic benefits especially given our cognitive and epistemic limits but appeal to these general pragmatic benefits does not fully explain the normative force of these norms in the particular case in response to this challenge some think these norms are at bottom norms of theoretical rationality on one's beliefs some think these norms are

constitutive of intentional agency some think they are norms of interpretation and some think the idea of such norms of practical rationality is a myth these essays chart an alternative path this path sees these planning norms as tracking conditions of a planning agent s self governance both at a time and over time it seeks associated models of such self governance and it appeals to the idea that the end of one s self governance over time while not essential to intentional agency per se is within the planning framework rationally self sustaining and a keystone of a rationally stable reflective equilibrium that involves the norms of plan rationality this end is thereby in a position to play a role in our planning framework that parallels the role of a concern with quality of will within the framework of the reactive emotions as understood by peter strawson
