conception of the self as fundamentally connected with other people creatures and things such views present profound challenges to western hyperindividualism and its excessive concern with self interest and tendency toward self centered behavior this anthology presents a wide ranging interdisciplinary exploration of the nature and implications of the oneness hypothesis while fundamentally inspired by east and south asian traditions in which such a view is often critical to their philosophical approach this collection also draws upon religious studies psychology and western philosophy as well as sociology evolutionary theory and cognitive neuroscience contributors trace the oneness hypothesis through the works of east asian and western schools including confucianism mohism daoism buddhism and platonism and such thinkers as zhuangzi kant james and dewey they intervene in debates over ethics cultural difference identity group solidarity and the positive and negative implications of metaphors of organic unity challenging dominant views that presume that the proper scope of the mind stops at the boundaries of skin and skull the oneness hypothesis shows that a more relational conception of the self is not only consistent with contemporary science but has the potential to lead to greater happiness and well being for both individuals and the larger wholes of which they are parts
