this textbook provides a fundamental approach to rf and microwave engineering it is unusual for the thoroughness with which these areas are presented the effect is that the reader comes away with a deep insight not only of the design formulation but answers to how and why those formulations work this is especially valuable for engineers whose careers involve research and product development wherein the applicability of the applied principles must be understood the scope of this book extends from topics for a first course in electrical engineering in which impedances are analyzed using complex numbers through the introduction of transmission lines that are analyzed using the smith chart and on to graduate level subjects such as equivalent circuits for obstacles in hollow waveguides analyzed using green s functions this book is a virtual encyclopedia of circuit design methods despite the complexity topics are presented in a conversational manner for ease of comprehension the book is not only an excellent text at the undergraduate and graduate levels but is as well a detailed reference for the practicing engineer consider how well informed an engineer will be who has become familiar with these topics as treated in high frequency techniques in order of presentation brief history of wireless radio and the morse code u s radio frequency allocations introduction to vectors ac analysis and why complex numbers and impedance are used circuit and antenna reciprocity decibel measure maximum power transfer skin effect computer simulation and optimization of networks lc matching of one impedance to another coupled resonators uniform transmission lines for propagation vswr return loss and mismatch error the telegrapher equations derived phase and group velocities the impedance transformation equation for lines derived fano s and bode s matching limits the smith chart derived slotted line impedance measurement constant q circles on the smith chart approximating a transmission line with lumped l s and c s abcd z y and scattering matrix analysis methods for circuits statist
