when we are born we do not come with an instruction manual and yet we do it is written in the cosmos as we are not directly aware of it we go about our lives without taking the time to sit down and carefully read it our focus acts as a lens as we receive energy to fuel us from where our attention lies through a philosophical approach at physics this book gives a glimpse into our hidden potential if we might just learn to focus our attention all things are part of the picture and only when zoom out enough to see the infinite nature of reality can we focus on it and bring resolution to the big picture to grow we must learn to be lifelong students of reality like a magnet if we get close enough to the truth and are open to receive it we will be pulled in discover why scientifically all is one and one is all

dan is this book going to provide a substantial coherent and timely contribution to CSCW or is it just going to be a ragbag of papers from several meetings stuck together the latter of course colston however and the however was rather long and technical but not substantially different in overall content from that of this preface most of the papers contained in this book were initially presented at meetings organized by the UK's computer supported

cooperative work cscw special interest group in 1991 but the book is not a proceedings whatever the above quotation suggests readers will immediately notice that unlike typical proceedings all the references are placed together at the end of the book and that there is a substantial index the hall mark of all proper technical books of quality if you choose to delve further than this preface you will find that each chapter is cross referenced thus you also gain a coherent structure across chapters an advantage traditionally associated with high quality single author books furthermore turning apparent disadvantage to advantage while single author books must inevitably present the idiosyncratic perspective of their author in this book and appropriately for a young area such as cscw you will be presented with the views of a dozen cscw experts who all have considerable hard won experience gained over many years

the idea of holding a colloquium on schmidt telescopes techniques and science originated from the observation that in the last ten years and in spite of the remarkable developments and achievements in this field of astronomical research there had been no specific opportunity for the experts to meet together make the point on the state of the art discuss and coordinate future plans therefore prof I rosino one of the pioneers in the use of wide field telescopes driven also by the wish of honouring the over four decades of activity of the asiago observatory proposed to the executive committee of the international astronomical union to sponsor a colloquium on astronomy with schmidt type telescopes i to be held at asiago at the end of the summer of

1983 details about the composition of the scientific organizing committee and the sponsoring organizations are given in prof rosino s welcome to the participants the granting of this proposal was the beginning of a number of headaches for the members of the local organizing committee r barbon f ciatti p rafanelli and myself if organizationwise the colloquium was successful this is truly due to the generous efforts of my colleagues of the soc and to the efficient organization of the linta park the hotel hosting the meeting
