data methods and theory in the organizational sciences explores the long term evolution and changing relationships between data methods and theory in the organizational sciences in the last 50 years theory has come to dominate research and scholarship in these fields yet the emergence of big data as well as the increasing use of archival data sets and meta analytic methods to test empirical hypotheses has upset this order this volume examines the evolving relationship between data methods and theory and suggests new ways of thinking about the role of each in the development and presentation of research in organizations this volume utilizes the latest thinking from experts in a wide range of fields on the topics of data methods and theory and uses this knowledge to explore the ways in which behavior in organizations has been studied this volume also argues that the current focus on theory is both unhealthy for the field and unsustainable and it provides more successful ways theory can be used to support and structure research and demonstrates the most effective techniques for analyzing and making sense of data this is an essential resource for researchers professionals and educators who are looking to rethink their current approaches to research and who are interested in creating more useful and more interpretable research in the organizational sciences

ferguson s careers in focus books are a valuable career exploration tool for libraries and career centers written in an easy to understand yet informative style this

series surveys a wide array of commonly held jobs and is arranged into volumes organized by specific industries and interests each of these informative books is loaded with up to date career information presented in a featured industry article and a selection of detailed professions articles the information here has been researched vetted and analyzed by ferguson s editors drawing from government and industry sources professional groups news reports career and job search resources and a variety of other sources for readers making career choices these books offer a wealth of helpful information and resources each profession article includes guick facts a snapshot of important job facts overview briefly introduces duties and responsibilities history describes the origins and history of the job the job describes primary and secondary goals and duties earnings discusses salary ranges and typical fringe benefits work environment looks at typical work conditions and surroundings associated with the job exploring offers suggestions on how to gain experience and knowledge about or even test drive a career before making a commitment education and training requirements discusses required high school and post secondary education and training certification licensing and special requirements explains recommended and required certifications or prerequisites for the job experience skills and personality traits summarizes the personal traits and skills and professional experience needed to get started and succeed employer prospects gives an overview of typical places of employment and the best ways to land a job advancement prospects presents an expected career path and how to travel it outlook summarizes the job s potential growth or decline in terms of the general economy and industry projections unions and associations lists essential and helpful professional groups tips for entry additional tips for preparing for a career and getting a foot in the door for more information lists organizations that provide career information networking and professional development sidebars short features showcasing stats trivia and insight about a profession or industry careers in focus alternative energy third edition covers 37 jobs including bioenergy biofuels workers biofuels biodiesel technology and product development managers biofuels processing technicians biofuels production managers biomass plant technicians biomass power plant managers energy brokers energy conservation technicians environmental engineers environmental lobbyists environmental planners environmental scientists environmental technicians fuel cell engineers fuel cell technicians fuel cell technology workers futurists geotechnical engineers geothermal energy industry workers geothermal production managers geothermal technicians green builders green transportation careers hydroelectric plant technicians hydroelectric production managers hydropower and marine energy industry workers renewable energy careers renewable energy engineers solar energy industry workers solar engineers wind energy industry workers

Careers in Focus: Alternative Energy, Third Edition

2021-06-01

this book offers a solutions based approach to climate change problems which potentially impinge on human beings within the tropics it largely comprises research articles with supplementary applications and illustrations the effects of atmospheric phenomena energy acquisition wind power co2 sequestration are linked with soils aquatic life reducing deforestation rainwater harvesting and clay pot farming climate plant disease and food security to show that no area of life is untouched by the phenomenon of climate change it discusses specific problem areas and provides an overview of geotechnical and sustainable solutions to lessen the impact of climate

biogeochemistry may be defined as the science that combines biological and chemical perspectives for the examination of the earth s surface including the relations between the biosphere lithosphere atmosphere and hydrosphere biogeochemistry is a comparatively recently developed science that incorporates scientific knowledge and findings research methodologies and models linking the biological chemical and earth sciences therefore while it is a definitive science with a strong theoretical core it is also dynamically and broadly interlinked with other sciences this book examines the complex science of biogeochemistry from a novel perspective examining its comparatively recent development while also emphasizing its interlinked relationship with the earth sciences including the complementary science of geochemistry the geographical sciences biogeography oceanography geomatics earth systems science the biological sciences ecology wildlife studies biological aspects of environmental sciences and the chemical sciences including environmental chemistry and pollution the book covers cutting edge topics on the science of biogeochemistry examining its development structure interdisciplinary multidisciplinary and transdisciplinary relations and the future of the current complex knowledge systems especially in the context of technological developments and the computer and data fields

diverse factors like globalization geopolitical tensions and the transformation of lifestyles are strengthening the role of mobility as a structuring dimension of contemporary societies social science research has taken note of these changes but few studies cross the different forms of mobility ranging from commuting to tourists and backpackers and on to seasonal workers or international migrants the diversity of mobility situations studied in this book highlights the contribution of the

reality of mobility in the daily construction of urban regional and global spaces as well as in the redefinition of socio spatial concepts by using an interdisciplinary relational approach the book revisits certain concepts such as exclusion heritage or distance in order to understand spatialities beyond the oppositions of fixity mobility private public or here elsewhere the book sheds light on the capacities for resistance of mobile persons in singapore dakar bangkok amman paris new york or mexico by studying the power relationships that are established in situations of mobility by deciphering the values that characterize regimes of im mobility the contributors stress the normative injunctions of public policies and social practices the originality of the work lies in capturing the deployment of alternative spatialities and underlining how they are reshaped between sedentary and mobility regimes it highlights the importance of fully associating mobility with its characteristics of ephemerality and fluidity in our theorizations and understandings of spatialities by taking a post structuralist posture the book makes it possible to establish a logic of and to design a between of things and to reverse ontology this allows the temporary and the connected to be rehabilitated beyond distance in our practical knowledge of spatialities as such the volume will be of interest to scholars of geography sociology anthropology and urban studies with interests in mobility migration and relational thought
