It is a branch of mathematics that deals with the study of functions of complex variables. The theory is based on the concept of analytic functions, which are functions that can be represented by a power series in the complex plane. The theory is used in many areas of science and engineering, including physics, chemistry, and electrical engineering. It is a powerful tool for understanding the behavior of systems and for solving problems in these fields. The theory is also used in the study of conformal mappings, which are mappings between different regions in the complex plane. This theory is a fundamental part of complex analysis and has many applications in the real world.
