with a 4 page full color insert and black and white illustrations throughout why do some innocent kids grow up to become cold blooded serial killers is bad biology partly to blame for more than three decades adrian raine has been researching the biological roots of violence and establishing neurocriminology a new field that applies neuroscience techniques to investigate the causes and cures of crime in the anatomy of violence raine dissects the criminal mind with a fascinating readable and far reaching scientific journey into the body of evidence that reveals the brain to be a key culprit in crime causation raine documents from genetic research that the seeds of sin are sown early in life giving rise to abnormal physiological functioning that cultivates crime drawing on classical case studies of well known killers in history including richard speck ted kaczynski and henry lee lucas raine illustrates how impairments to brain areas controlling our ability to experience fear make good decisions and feel guilt predispose us to violence he contends that killers can actually be coldhearted something as simple as a low resting heart rate can give rise to violence but arguing that biology is not destiny he also sketches out provocative new biosocial treatment approaches that can change the brain and prevent violence finally raine tackles the thorny legal and ethical dilemmas posed by his research visualizing a futuristic brave new world where our increasing ability to identify violent offenders early in life might shape crime prevention policies for good and bad will we sacrifice our notions of privacy and civil rights to identify children as potential killers in the hopes of helping both offenders and victims how should we punish individuals with little to no control over their violent behavior and should parenting require a license the anatomy of violence offers a revolutionary appraisal of our understanding of criminal offending while also raising provocative questions that challenge our core human values of free will responsibility and punishment

bestselling true crime author christopher berry dee s latest book tackles the heavy crime of people who randomly kill large numbers of others spree killers and those who set out to do so in specific places or situations mass killers as such killings become more frequent the ready availability and ease of obtaining firearms and weak background checks in the united states inevitably leads to many of these cases but there have been other recent examples in the united kingdom new zealand and norway where extremely robust firearms legislation could not stop these horrific crimes what is more difficult to establish is the motivation behind such killings some are occasioned by grievance real or imagined while others have their origins in a sense of failure or feelings of inadequacy yet others seem to be driven by a desire for power over their fellow humans often coupled with an overriding contempt for the lives of others in a search for answers christopher berry dee offers case studies in some of the most infamous mass killings of the past fifty years from school massacres to workplace killings hate crimes to familicides but is the awful truth that such murderers are almost impossible to predict and therefore almost impossible to prevent dig in and find out
