from the time of pythagoras we have been tempted to treat numbers as the ultimate or only truth this book tells the history of that habit of thought but more it argues that the logic of counting sacrifices much of what makes us human and that we have a responsibility to match the objects of our attention to the forms of knowledge that do them justice humans have extended the insights and methods of number and mathematics to more and more aspects of the world even to their gods and their religions today those powers are greater than ever as computation is applied to virtually every aspect of human activity but the rules of mathematics do not strictly apply to many things from elementary particles to people in the world by subjecting such things to the laws of logic and mathematics we gain some kinds of knowledge but we also lose others how do our choices about what parts of the world to subject to the logics of mathematics affect how we live and how we die this question is rarely asked but it is urgent because the sciences built upon those laws now govern so much of our knowledge from physics to psychology number and knowledge sets out to ask it in chapters proceeding chronologically from ancient greek philosophy and the rise of monotheistic religions to the emergence of modern physics and economics the book traces how ideals practices and habits of thought formed over millennia have turned number into the foundation stone of human claims to knowledge and certainty but the book is also a philosophical and poetic exhortation to take responsibility for that history for the knowledge it has produced and for the many aspects of the world and of humanity that it ignores or endangers to understand what can be counted and what can t is to embrace the ethics of purposeful knowing
