A manual transmission (MT) is a type of transmission system used in motor vehicles. It is also known as a manual gearbox or standard transmission. In Canada, the United Kingdom, and the United States, it is often referred to as a stick shift. A manual transmission system requires the driver to manually select the gears by operating a gear stick and a clutch. This system is commonly used in vehicles in various parts of the world, including North America and Europe. The basic function of a manual transmission is to control the speed and torque of the vehicle in different driving conditions. It is a multi-speed motor vehicle transmission system.

The standard manual transmission is connected to the engine through the clutch. The input shaft of the transmission therefore turns at the same RPM as the engine, which improves both power output and fuel economy. This type of transmission is popular and common.
