*The Carolinas & the Georgia Coast* 1999-04 considers the native american abandonment of the south carolina coast a prevailing enigma in american archaeology is why vast swaths of land in the southeast and southwest were abandoned between ad 1200 and 1500 the most well known abandonments occurred in the four corners and mimbres areas of the southwest and the central mississippi valley in the twelfth and thirteenth centuries and in southern arizona and the ohio valley during the fifteenth century in megadrought in the carolinas the archaeology of mississippian collapse abandonment and coalescence john s cable demonstrates through the application of innovative ceramic analysis that yet another fifteenth century abandonment event took place across an area of some 34 5 million acres centered on the south carolina coast most would agree that these sweeping changes were at least in part the consequence of prolonged droughts associated with a period of global warming known as the medieval climatic anomaly cable strengthens this inference by showing that these events correspond exactly with the timing of two different geographic patterns of megadrought as defined by modern climate models cable extends his study by testing the proposition that the former residents of the coastal zone migrated to surrounding interior regions where the effects of drought were less severe abundant support for this expectation is found in the archaeology of these regions including evidence of accelerated population growth crowding and increased regional hostilities another important implication of immigration is the eventual coalescence of ethnic and or culturally different social groups and the ultimate transformation of societies into new cultural syntheses evidence for this process is not yet well documented in the southeast but cable draws on his familiarity with the drought related puebloan intrusions into the hohokam core area of southern arizona during the thirteenth and fourteenth centuries to suggest strategies for examining coalescence in the southeast the narrative concludes by addressing the broad implications of late prehistoric societal collapse for today s human propelled global warming era that portends similar but much more long lasting consequences

**Moon Coastal Carolinas** 2016-01-19 the annually updated insiders guide to north carolinas central coast and new bern is this areas most complete source of travel and newcomer information
