MotorBoating 1995-03 fuels and fuel technology volume one a summarized manual provides information pertinent to the fundamental aspects of fuels and fuel technology this book presents a reasonably accurate summary of the existing knowledge and literature relating to fuel technology organized into two sections encompassing 72 data sheets this volume begins with an overview of fuels as organic combustible substances used mainly or solely for the production of useful heat that are divided into three classes namely solid liquid and gaseous fuels this text then examines the main chemical components of wood this book discusses as well the commercial production of peat the final section deals with the calculations of theoretical and actual air requirements dry and wet flue gases and carbon dioxide in flue gases this book is a valuable resource for chemists and fuel technologists students who are interested to obtain a qualification in the subject of fuels or fuel technology will also find this book useful

Diesel Truck Specifications 2010 2010 road vehicle components diesel engines performance compression ignition engines testing conditions test equipment type testing exhaust gases opacity performance testing smoke smoke detectors power mechanics diesel fuels calorific value certificates of conformity data recording chemical composition chemical properties torque

Index of Specifications and Standards (used By) Department of the Navy 1955-10 this document provides the comprehensive list of chinese national standards and industry standards total 17 000 standards

Index of Specifications and Standards Used by Department of the Navy 1953 a comprehensive review of the current status and challenges for natural gas and shale gas production treatment and monetization technologies natural gas processing from midstream to downstream presents an international perspective on the production and monetization of shale gas and natural gas the authors review techno economic assessments of the midstream and downstream natural gas processing technologies comprehensive in scope the text offers insight into the current status and the challenges facing the advancement of the midstream natural gas treatments treatments covered include gas sweetening processes sulfur recovery units gas dehydration and natural gas pipeline transportation the authors highlight the downstream processes including physical treatment and chemical conversion of both direct and indirect conversion the book also contains an important overview of natural gas monetization processes and the potential for shale gas to play a role in the future of the energy market specifically for the production of ultra clean fuels and value added chemicals this vital resource provides fundamental chemical engineering aspects of natural gas technologies covers topics related to upstream midstream and downstream natural gas treatment and processing contains well integrated coverage of several technologies and processes for treatment and production of natural gas highlights the economic factors and risks facing the monetization technologies discusses supply chain environmental and safety issues associated with the emerging shale gas industry identifies future trends in educational and research opportunities directions and emerging opportunities in natural gas monetization includes contributions from leading researchers in academia and industry written for industrial scientists academic researchers and government agencies working on developing and sustaining state of the art technologies in gas and fuels production and processing natural gas processing from midstream to downstream provides a broad overview of the current status and challenges for natural gas production treatment and monetization technologies
