Consumer Society and the Post-modern City

2004-03-01

the fact that we inhabit a consumer society has incredibly far reaching implications working through the often controversial ideas of the consumer society s most influential theorists jean baudrillard and zygmunt bauman this book assesses the ways in which consumerism is reshaping the nature and meaning of the city it examines the nature of consumption and its increasing centrality to post modern society by considering the development of consumerism as a central facet of social life demonstrating that social inequalities are increasingly structured around consumption uncovering the hidden consequences of consumerism pondering the meaning of lifestyle revealing how the nature of reality is changing in an age of globalization employing a sustained and engaging theoretical analysis the book ranges across a variety of sometimes unexpected topics it represents an impassioned plea for everyone interested in the social life of cities to take the notion of the consumer society and the arguments of its major theorists seriously

Monthly Catalog of United States Government Publications

2000-07

this book constitutes the thoroughly refereed and extended post proceedings of the joint ercim colognet international workshop on constraint solving and constraint logic programming csclp 2005 the 12 revised full papers presented were carefully reviewed and selected for inclusion in the book the papers are organized in topical sections on global constraints search and heuristics language and implementation issues and modeling

Recent Advances in Constraints

2006-05-15

this book constitutes the refereed proceedings of the 11th international conference on principles and practice of constraint programming cp 2005 held in sitges spain in october 2005 the 48 revised full papers and 22 revised short papers presented together with extended abstracts of 4 invited talks and 40 abstracts of contributions to the doctoral students program as well as 7 abstracts of contributions to a systems demonstration session were carefully reviewed and selected from 164 submissions all current issues of computing with constraints are addressed ranging from methodological and foundational aspects to solving real world problems in various application fields

Principles and Practice of Constraint Programming - CP 2005

2005-09-22

providing a concise update of the current knowledge on human papillomavirus hpv infections and their intimate link to cervical cancer the book focuses on five interrelated topics high and low risk hpv infections methods for hpv detection and use of

Oracle® Solaris 11 System Administration

2013-06-21

this book provides contemporary knowledge on school effectiveness and proposes strategic interventions for enhancing it it focuses on improving academic leadership for enhancing the effectiveness of schools and discusses how national education policies are helpful in providing a vision towards improving school effectiveness it highlights the role of teachers as academic leaders in the implementation of policy recommendations at school and classroom levels it offers methods and mechanisms for academic leaders to measure the learning of students for school assessment the author also discusses how academic leadership involves creating a vision and mission based on science and research data for the organisation inspiring innovation and creative ideas developing teamwork and a safe environment for staff to express their views while providing an understanding of school as an organization the volume outlines its management functions such as processes and quality of planning management of curriculum learner evaluation institutional networks and human resource management among others the volume is a guidebook for training and capacity building for school level practitioners and leaders in education management embedded with real life cases and episodes this volume will be of interest to teachers students and practitioners of education management and education management it will also be useful for academicians educationalists practitioners management professionals educational leaders and policymakers

in the summer of 1956 john mccarthy organized the famous dartmouth conference which is now commonly viewed as the founding event for the field of artificial intelligence during the last 50 years ai has seen a tremendous development and is now a well established scientific discipline all over the world also in europe ai is in excellent shape as witnessed by the large number of high quality papers in this publication in comparison with ecai 2004 there s a strong increase in the relative number of submissions from distributed ai agents and cognitive modelling knowledge representation reasoning is traditionally strong in europe and remains the biggest area of ecai 06 one reason the figures for case based reasoning are rather low is that much of the high quality work in this area has found its way into prestigious applications and is thus represented under the heading of pais

Emerging Issues on HPV Infections

2006-01-01

in 1996 and with extraordinary prescience panfilov and holden had highlighted in their seminal book computational biology of the heart that biology was potentially the most mathematical of all sciences fast

forward 20 years and we have seen an explotion of applications of mathematics in not only biology but healthcare that has already produced significant breakthroughs not imaginable more than 20 years ago great strides have been made in explaining through quantitative methods the underlying mechanisms of human disease not without considerable ingenuity and effort biological mechanisms are bewildering complex ever evolving multi scale variable difficult to fully access and understand this poses immense challenges to the computational physiology community that nevertheless has developed an impressive arsenal of tools and methods in a vertiginous race to combat disease with the tall order of improving human healthcare mechanistic models are now contending with the advent of machine learning in healthcare and the hope is that both approaches will be used synergistically since the complexity of human patophysiology and the difficulty of acquiring human datasets will require both deductive and inductive methods this research topic presents work that is currently at the frontier in computational physiology with a striking range of applications from diabetes to graft failure and using a multitude of mathematical tools this collection of articles represents a snapshot in a field that is moving a dizzying speed bringing understanding of fundamental mechanism and solutions to healthcare problems experienced by healthcare systems all over the world
