Apr 09 2023

multivariate analysis is a statistical technique used to analyse datasets that involve multiple variables unlike univariate analysis which examines one variable at a time multivariate analysis considers the relationships between multiple variables simultaneously

univariate vs multivariate analysis what s the difference

Mar 08 2023

the term multivariate analysis refers to the analysis of more than one variable you can remember this because the prefix multi means more than one there are three common ways to perform univariate analysis 1 summary statistics we can calculate measures of central tendency like the mean or median for one variable
