NASA Tech Brief 1963 published in the year 1981 aspects of the development of competence is a valuable contribution to the field of developmental psychology

U. S. Government Films 1969 glaciers and glaciation is the classic textbook for all students of glaciation stimulating and accessible it has established a reputation as a comprehensive and essential resource in this new edition the text references and illustrations have been thoroughly updated to give today's reader an up to the minute overview of the nature origin and behaviour of glaciers and the geological and geomorphological evidence for their past history on earth the first part of the book investigates the processes involved in forming glacier ice the nature of glacier climate relationships the mechanisms of glacier flow and the interactions of glaciers with other natural systems such as rivers lakes and oceans in the second part the emphasis moves to landforms and sediment the interpretation of the earth's glacial legacy and the reconstruction of glacial depositional environments and palaeoglaciology

U.S. Government Films; a Catalog 1969 comprehensive materials processing thirteen volume set provides students and professionals with a one stop resource consolidating and enhancing the literature of the materials processing and manufacturing universe it provides authoritative analysis of all processes technologies and techniques for converting industrial materials from a raw state into finished parts or products assisting scientists and engineers in the selection design and use of materials whether in the lab or in industry it matches the adaptive complexity of emergent materials and processing technologies extensive traditional article level academic discussion of core theories and applications is supplemented by applied case studies and advanced multimedia features coverage encompasses the general categories of solidification powder deposition and deformation processing and includes discussion on plant and tool design analysis and characterization of processing techniques high temperatures studies and the influence of process scale on component characteristics and behavior authored and reviewed by world class academic and industrial specialists in each subject field practical tools such as integrated case studies user defined process schemata and multimedia modeling and functionality maximizes research efficiency by collating the most important and established information in one place with integrated applets linking to relevant outside sources

Metals Abstracts 1978 the german version of this standard work has provided generations of engineers with a comprehensive source of reference and guidance on which they can rely throughout their professional lives and is due to appear in its 19th edition now for the first time the key sections of this authoritative work are available in english while din standards are retained throughout the iso equivalents are given wherever possible each subject is discussed in detail and supported by numerous figures and tables equipping students and practitioners with a concise yet detailed treatment of mechanics strength of materials thermodynamics engineering design hydraulic and pneumatic power transmission components of thermal apparatus machine dynamics and components manufacturing process and systems simply a must

Bulletin of University of Osaka Prefecture 1960 this publication reviews the results of research on the western pine beetle up to July 1 1952 it shows the progress that has been made in over a half century of study of this one bark beetle it also records the trials and errors the research that ran into blind alleys the record of this pioneer effort in the field of forest entomology in the united states should be of great help to research workers who are faced with similar problems

The Science Reports of the Tōhoku University, Sendai, Japan 1959 advanced modeling and optimization of manufacturing processes presents a comprehensive review of the latest international research and development trends in the modeling and optimization of manufacturing processes with a focus on machining it uses examples of various manufacturing processes to demonstrate advanced modeling and optimization techniques both basic and advanced concepts are presented for various manufacturing processes mathematical models traditional and non traditional optimization techniques and real case studies the results of the application of the proposed methods are also covered and the book highlights the most useful modeling and optimization strategies for achieving best process performance in addition to covering the advanced modeling optimization and environmental aspects of machining processes advanced modeling and optimization of manufacturing processes also covers the latest technological advances including rapid prototyping and tooling micromachining and nano finishing advanced modeling and optimization of manufacturing processes is written for designers and manufacturing engineers who are responsible for the technical aspects of product realization as it presents new models and optimization techniques to make their work easier more efficient and more effective it is also a useful text for practitioners researchers and advanced students in mechanical industrial and manufacturing engineering

U.S. Government Films for School and Industry 1951 this extended teacher resource tool includes detailed teaching notes for each of the 34 emergent and early titles from the red set teaching notes include whole and small group instruction engagement for english language learners multiple assessments for each title blackline masters and running records for each title are included great resource for using engage literacy to meet your common core language arts instructional needs

Aspects of the Development of Competence 2015-12-22 this special issue provides a current snapshot of recent advances and ongoing challenges in the development of titanium alloys for biomedical implants and devices titanium offers significant advantages over other materials including higher strength and better biocompatibility this issue highlights current trends and recent developments including the uptake of additive manufacturing 3d printing and approaches to improve processing and performance of titanium alloys for medical applications

Science Reports 1959 this new book takes us through a journey from early life to modern agriculture the thirty eight authors present current studies on the interrelation of plants animals this topic has always fascinated man as evidenced even by the first chapters of genesis the world of aqueous and terrestrial fauna appeared on early earth

only after the flora covered the areas with the green pigmentation almost all life depends upon sunlight via the photosynthesis of the botanical world we read about the harnessing of bee pollination of crops to make it an essential component of modern agriculture endeavor some plants seduce insects for pollination by their appearance e.g. disguised orchids entice visitors there is the production of sweet nectar as a bribe in flowers to attract bees butterflies and honey sucking birds a particular outstanding phenomena are the carnivorous plants that have developed trapping and digesting systems of insects and higher animals

Wood and Machines 1977 machining remains a hugely important process in modern engineering and manufacturing practice and students need to be aware of the vast host of methods and technologies available to meet all sorts of precision and surface finish requirements fundamentals of machining processes conventional and nonconventional processes is the first textbook to collect all of the major methods into a single reference from cutting and abrasive processes to erosion hybrid and micromachining processes a solid foundation the text begins with an introduction to the various machining processes followed by detailed discussions of cutting tool materials and geometry mechanics of orthogonal cutting the various factors affecting the economics of machining and cutting methods for both flat and cylindrical surfaces the author then shifts focus to high speed machining and abrasive processes including abrasive finishing and advanced processes such as ultrasonic and abrasive jet machining a firm step forward after laying a groundwork in the conventional processes el hofy delves into modern machining topics he explains electrochemical and thermal erosion techniques combined machining processes and the various micromachining techniques based on the previously discusses processes extensive worked examples illustrations and homework problems reinforce a practical understanding of the concepts reflecting the author s more than 30 years of industrial and teaching experience fundamentals of machining processes is a resource that students will carry with them well into their careers

Glaciers and Glaciation, 2nd edition 2014-02-04 this thoroughly revised book now in its second edition gives a complete coverage of the fundamental concepts and applications of production engineering divided into six parts the text covers the various theoretical concepts design and process of metal cutting the design and mechanism of various machine tools and various aspects of precision measurement and manufacturing the concepts and processes of metal working and the design of press tools various modern methods of manufacturing such as ultrasonic machining usm electrochemical deburring ecd and hot machining are also covered a variety of worked out examples and end of chapter review questions are provided to strengthen the grasp as well as to test the comprehension of the underlying concepts and principles the text is extensively illustrated to aid the students in gaining a thorough understanding of various production processes and the principles behind them the text is intended to serve the needs of the undergraduate students of mechanical engineering and production engineering the postgraduate students of mechanical engineering and production engineering will also find the book highly useful key features incorporates a new chapter on grinding and other abrasive metal removal processes includes new sections on electric motors for machine tools in chapter 18 production of screw threads in chapter 22 linear precision measurement surface finish and machine tools in chapter 23 presents several new illustrative examples throughout the book

Comprehensive Materials Processing 2014-04-07 chinese labor in a korean factory draws on fieldwork in a multinational corporation mnc in qingdao china and delves deep into the power dynamics at play between korean management chinese migrant workers local level chinese government officials and chinese local gangs anthropologist jaesok kim examines how governments to attract mncs relinquish parts of their legal rights over these entities while mncs also give up portions of their rights as proxies of global capitalism by complying with local government guidelines to ensure infrastructure and cheap labor this ethnography demonstrates how a particular mnc struggled with the pressure to be increasingly profitable while negotiating the clash of korean and chinese cultures traditions and classes on the factory floor of a garment corporation chinese labor in a korean factory pays particular attention to common features of post socialist countries by analyzing the contentious collaboration between foreign management factory workers government officials and gangs this study contributes not only to the research on the politics of resistance but also to how global and local forces interact in concrete and surprising ways

Miscellaneous Publication 1960 despite their ubiquitous presence among prehistoric remains in greece ground stone tools have yet to attract the same kind of attention as have other categories of archaeological material such as pottery or lithics flexible stones provides a detailed analysis of the material discovered during the excavations at franchthi cave peloponnese greece approximately 500 tools the raw material used for their manufacture as well as the byproducts of such manufacture were found most of this collection comes from the neolithic component of the site including a small number of palaeolithic and mesolithic cases with a large number of the studied tools indicating multiple uses anna stroulia sees the multifunctional character of these tools as a conscious choice that reflects a flexible attitude of tool makers and users toward tools and raw materials a cd rom with 209 additional plates is included
