the emergence of music printing and publishing in the early 16th century radically changed how music was circulated and how the musical source printed or manuscript was perceived and used in performance this series of close studies of the structure and content of 16th century and early 17th century editions and some manuscripts of music draws conclusions in a number of areas printing techniques for music the habits of different type setters and scribes and their view of performing practice publishers approaches to the musical market and its abilities and interests apparent changes of

plan in preparing editions questions of authorship evidence in editions and manuscripts for interpreting different levels of notation ways in which scribes could influence performers decisions and others by which composers could exploit unusual sonorities

Critica Musica 2000

the book looks at how people things and new forms of knowledge created publics in early modern europe and how publics changed the shape of early modern society the focus is on what the authors call making publics the active creation of new forms of association that allowed people to connect with others in ways not rooted in family rank or vocation but rather founded in voluntary groupings built on the shared interests tastes commitments and desires of individuals by creating new forms of association cultural producers and consumers challenged dominant ideas about just who could be a public person greatly expanded the resources of public life for ordinary people in their own time and developed ideas and practices that have helped create the political culture of modernity coming from a number of disciplines including literary and cultural studies art history history of religion history of science and musicology the contributors develop analyses of a range of cases of early modern public making that together demonstrate the rich inventiveness and formative social power of artistic and intellectual publication in this period

understanding chemical reactivity has been the permanent concern of chemists from time immemorial if we were able to understand it and express it quantitatively there would practically remain no unsolved mystery and reactions would be fully predictable with their products and rates and even side reactions the beautiful developments of thermodynamics through the 19th century supplied us with the knowledge of the way a reactions progresses and the statistical view initiated by gibbs has progressively led to an unders tanding closer to the microscopic phenomena but is was always evident to all that these advances still left our understanding of chemical reactivity far behind

our empirical knowledge of the chemical reaction in its practically infinite variety the advances of recent years in quantum chemistry and statistical mechanics enhanced by the present availability of powerful and fast computers are very fast changing this picture and bringing us really close to a microscopic understanding of chemical equilibria reaction rates etc this is the reason why our society encouraged a few years ago the initiative of professor savo bratos who with a group of french colleagues prepared an impressive study on reactivite chimique en phase liquide a prospective report which was jointly published by the societe fran
