The National Aeronautics and Space Administration (NASA) and the Department of Defense (DoD) have established the National Aerospace Initiative (NAI) to sustain the aerospace leadership of the United States through the acceleration of selected aerospace technologies. Hypersonic flight, access to space, and space technologies are key areas of focus. The Air Force became concerned about the NAI's possible consequences on Air Force programs and budget if NAI program decisions differed from Air Force priorities. To examine this issue, it asked the National Research Council (NRC) for an independent review of the NAI. This report presents the results of that assessment. It focuses on three questions asked by the Air Force: is NAI technically feasible in the time frame laid out; is it financially feasible over that period; and is it operationally relevant. This engaging collection examines the implications and representations of race, class, and gender in health care, offering new approaches to women's health care. Subjects covered range from reproductive issues to AIDS. One procedural misstep in patent interference practice can put an invention at risk. Patent interference practice handbook is the only book that leads you step by step through proper procedure at every stage of the interference process, before and after declaration, covering practice before the U.S. Patent Office, the district courts, and the court of appeals for the federal circuit. This intensely practical guide shows you exactly how to assess elements such as anticipation, use, or sale, obviousness, abandonment, suppression, concealment, establish patentability, determine priority, meet reduction to practice standards, meet all burden of proof requirements, avoid export license violations, file preliminary statements and motions, bring civil actions or appeals after interference at every stage of his process. Distinguished scholars examine the phenomena of passives and causatives in languages from around the world. Appendix 20. In saving one another: Philodemus and Paul on moral formation in community. Justin Reid Allison compares how the Epicurean philosopher Philodemus and the Christian apostle Paul envisioned the members of their communities helping one another to grow into moral maturity. Allison establishes that Philodemus and Paul are more similar than previously noticed in their conception and practice of moral formation in community, and that these similarities offer a critical opportunity to consider important differences between the two, as well as by deepening the comparison to include differences alongside similarities and to include theological and socio-economic facets of communal moral formation. Allison shows that Philodemus and Paul uniquely shed fresh light on one another's texts when understood in comparative perspective. People want to live a healthy and happy later life. A large body of literature shows the close association between health status and happiness and between health and active engagement in work, exercise, and social and religious activities. However, the causation between the two can run both ways, and it is difficult to determine the causal effect with cross-sectional data. Various authors have shown the significant influence of socioeconomic factors and human needs on older people's health status and happiness. A better understanding of the factors affecting healthy and happy aging is essential for policymaking to improve the well-being of older people. The availability of data from HRS family studies in
