the amusement parks which first appeared in england at the turn of the twentieth century represent a startlingly novel and complex phenomenon combining fantasy architecture new technology ersatz danger spectacle and consumption in a new mass experience though drawing on a diverse range of existing leisure practices the particular entertainment formula they offered marked a radical departure in terms of visual experiential and cultural meanings the huge socially mixed crowds that flocked to the new parks did so purely in the pursuit of pleasure which the amusement parks commodified in exhilarating new guises between 1906 and 1939 nearly 40 major amusement parks operated across britain by the outbreak of the second world war millions of people visited these sites each year the amusement park had become a defining element in the architectural psychological pleasurescape of britain this book considers the relationship between popular modernity pleasure and the amusement park landscape in britain from 1900 1939 it argues that the amusement parks were understood as a new and distinct expression of modern times which redefined the concept of public pleasure for mass audiences focusing on three sites blackpool pleasure beach dreamland in margate and southend s kursaal the book contextualises their development with references to the wider amusement park world the meanings of these sites are explored through a detailed examination of the spatial and architectural form taken by rides and other buildings the rollercoaster a defining symbol of the amusement park is given particular focus as is the extent to which discourses of class gender and national identity were expressed through the design of these parks

principles of power system is a comprehensive textbook for students of engineering it also caters to the requirements of those readers who wish to increase their knowledge and gain a sound grounding in power systems as a whole twenty six chapters succinctly sum up the subject with topics such as supply and distribution systems fault calculations

symmetrical and unsymmetrical voltage control fuses and circuit breakers giving the learner an understanding of the subject and an orientation to apply the knowledge gained in real world problem solving a book which has seen foreseen and incorporated changes in the subject for more than 30 years it continues to be one of the most sought after texts by the students

the book provides a comprehensive theory of ode which come as euler lagrange equations from generally higher order lagrangians emphasis is laid on applying methods from differential geometry fibered manifolds and their jet prolongations and global analysis distributions and exterior differential systems lagrangian and hamiltonian dynamics hamilton jacobi theory etc for any lagrangian system of any order are presented the key idea to build up these theories as related with the class of equivalent lagrangians distinguishes this book from other texts on higher order mechanics the reader should be familiar with elements of differential geometry global analysis and the calculus of variations

geological repository systems for safe disposal of spent nuclear fuels and radioactive waste second edition critically reviews state of the art technologies and scientific methods relating to the implementation of the most effective approaches to the long term safe disposition of nuclear waste also discussing regulatory developments and social engagement approaches as major themes chapters in part one introduce the topic of geological disposal providing an overview of near surface intermediate depth and deep borehole disposal spanning low medium and high level wastes part two addresses the different types of repository systems crystalline clay and salt also discussing methods of site surveying and construction the critical safety issue of engineered barrier systems is the focus of part three with coverage ranging from nuclear waste canisters to buffer and backfill materials lastly parts four and five focus on safety security and acceptability concentrating on repository performance assessment then radiation

protection environmental monitoring and social engagement comprehensively revised updated and expanded with 25 new material on topics of current importance this is the standard reference for all nuclear waste management and geological repository professionals and researchers contains 25 more material on topics of current importance in this new comprehensive edition fully updated coverage of both near surface intermediate depth and deep borehole disposal in one convenient volume goes beyond the scientific and technical aspects of disposal to include the political regulatory and societal issues involved all from an international perspective

this textbook for graduates and advanced undergraduates in physics and physical chemistry covers the major areas of statistical mechanics and concludes with the level of current research it begins with the fundamental ideas of averages and ensembles focusing on classical systems described by continuous variables such as position and momentum and using the ideal gas as an example it then turns to quantum systems beginning with diatomic molecules and working up through blackbody radiation and chemical equilibria the discussion of equilibrium properties of systems of interacting particles includes such techniques as cluster expansions and distribution functions and uses non ideal gases liquids and solutions dynamic behavior treated here more extensively than in other texts is discussed from the point of view of correlation functions the text concludes with the problem of diffusion in a suspension of interacting hard spheres and what can be learned about such a system from scattered light intended for a one semester course the text includes several asides on topics usually omitted from introductory courses as well as numerous exercises

this volume deals with the connection between thinking and speaking and our forms of life all contributions engage with wittgenstein's approach to this topic as a whole the volume takes a stance against both biological and ethnological interpretations of the notion form of life and seeks to promote a broadly logico linguistic

understanding instead the structure of this book is threefold part one focuses on lines of thinking that lead from wittgenstein s earlier thought to the concept of form of life in his later work contributions to part two examine the concrete philosophical function of this notion as well as the ways in which it differs from cognate concepts contributions to part three put wittgenstein s notion of form of life in perspective by relating it to phenomenology ordinary language philosophy and problems in contemporary analytic philosophy

this book is an auto biography of trausti valsson an icelandic architect planner theoretician and a professor of planning at the university of iceland it gives a personal account of what shaped planning and design in the world and in iceland as he experienced it in his lifetime valsson e g tells about his personal encounter with ian mcharg buckminster fuller and christopher alexander early tv started working on a future plan for iceland consisting for example of roads connecting iceland s settlements across the central highlands he also started an overlay mapping project mapping both the hazard and resource areas of the country which created a basis for his iceland plan proposals work on this he continued at berkeley and at the university of iceland as he started teaching there in 1988 many of his articles and books deal with this subject in 1980 valsson started his phd studies in environmental planning at uc berkeley california in the philosophical section of his dissertation he presented his argument that the western mechanistic worldview was the underlying cause for today s alienation and that more holistic and integrative schemes were inherent in eastern worldviews tv s dissertation is called a theory of integration for design and planning based on the concept of complementarity 1987 in 1988 a year after valsson returned to iceland he got an associate professor position in planning at the engineering faculty of the university of iceland and later a tenured professor position the last part of this book describes valsson s 27 years at the university the title of this present book shaping the future ideas planning design reflects how wide valsson s field of his operation has been

one of the essential characteristics of living beings is the explosion of variety in their forms that is intrinsically linked to the diversity of the environments they have adapted to this book the result of collaboration between international specialists analyzes the multiplicity of these morphologies it explores the origin of forms their role in defining living things and the relationship between form and function it exposes the role of genes and epigenetics and examines the forms of bacteria protists and plants the explosion of life forms also studies the memory of animals and their sensory processes the forms of robots built in the image of living things and medical technologies aimed at restoring damaged living forms finally this work questions a common principle of construction in the diversity of forms as well as the idea of an abandonment of the form a possible hidden defect of some modern philosophies
