this is the first book to fully examine from an evolutionary point of view the association of social status and fertility in human societies before during and after the demographic transition in most nonhuman social species social status or relative rank in a social group is positively associated with the number of offspring with high status individuals typically having more offspring than low status individuals however humans appear to be different as societies have gotten richer fertility has dipped to unprecedented lows with some developed societies now at or below replacement fertility within rich societies women in higher income families often have fewer children than

women in lower income families evolutionary theory suggests that the relationship between social status and fertility is likely to be somewhat different for men and women so it is important to examine this relationship for men and women separately when this is done the positive association between individual social status and fertility is often clear in less developed pre transitional societies particularly for men once the demographic transition begins it is elite families particularly the women of elite families who lead the way in fertility decline post transition the evidence from a variety of developed societies in europe north america and east asia is that high status men particularly men with high personal income do have more children on average than lower status men the reverse is often true of women although there is evidence that this is changing in nordic countries the implications of these observations for evolutionary theory are also discussed this book will be of interest to students and researchers in the social sciences with an interest in evolutionary sociology evolutionary anthropology evolutionary psychology demography and fertility

two revolutions roiled the rural south after the mid 1960s the political revolution wrought by the passage of civil rights legislation and the ongoing economic revolution brought about by increasing agricultural mechanization political empowerment for black southerners coincided with the transformation of southern agriculture and the displacement of thousands of former sharecroppers from the land focusing on the plantation regions of alabama louisiana and mississippi greta de jong analyzes how social justice activists responded to mass unemployment by lobbying political leaders initiating antipoverty projects and forming cooperative enterprises that fostered economic and political autonomy efforts that encountered strong opposition from free market proponents who opposed government action to solve the crisis making clear the relationship between the civil rights movement and the war on poverty this history of rural organizing shows how responses to labor displacement in the south shaped the experiences of other americans who were affected by

mass layoffs in the late twentieth century shedding light on a debate that continues to reverberate today

praise for the third edition this volume is ground breaking in terms of mathematical texts in that it does not teach from a detached perspective but instead looks to show students that competent mathematicians bring an intuitive understanding to the subject rather than just a master of applications electric review a comprehensive introduction linear algebra ideas and applications fourth edition provides a discussion of the theory and applications of linear algebra that blends abstract and computational concepts with a focus on the development of mathematical intuition the book emphasizes the need to understand both the applications of a particular technique and the mathematical ideas underlying the technique the book introduces each new concept in the context of an explicit numerical example which allows the abstract concepts to grow organically out of the necessity to solve specific problems the intuitive discussions are consistently followed by rigorous statements of results and proofs linear algebra ideas and applications fourth edition also features two new and independent sections on the rapidly developing subject of wavelets a thoroughly updated section on electrical circuit theory illuminating applications of linear algebra with self study questions for additional study end of chapter summaries and sections with true false questions to aid readers with further comprehension of the presented material numerous computer exercises throughout using matlab code linear algebra ideas and applications fourth edition is an excellent undergraduate level textbook for one or two semester courses for students majoring in mathematics science computer science and engineering with an emphasis on intuition development the book is also an ideal self study reference

pedagogic frailty and resilience in the university presents a theoretical model and a practical tool to support the professional development of reflective university teachers it can be used to highlight links to key issues in higher education pedagogic frailty exists where the quality of interaction between elements in the evolving teaching environment succumbs to cumulative pressures that eventually inhibit the capacity to develop teaching practice indicators of frailty can be observed at different resolutions from the individual to the departmental or the institutional chapters are written by experts in their respective fields who critique the frailty model from the perspectives of their own research this will help readers to make practical links between established bodies of research literature and the concept of frailty and to form a coherent and integrated view of higher education this can then be explored and developed by individuals departments or institutions to inform and evaluate their own enhancement programmes this may support the development of greater resilience to the demands of the teaching environment in comparison with other commonly used terms we have found that the term frailty has improved resonance with the experiences of colleagues across the disciplines in higher education and elicits a personal sometimes emotional response to their professional situation that encourages positive dialogue debate and reflection that may lead to the enhancement of university teaching this book offers a particular route through the fractured discourses of higher education pedagogy creating a coherent and cohesive perspective of the field that may illuminate the experiences and observations of colleagues within the profession if we are to realise the promise of higher education we will need the concepts methods and reflections contained in this book
