A History of the Warfare of Science with Theology in Christendom, Vol. I (in Two Volumes) 2010-01-01 in this book the author argues for a rigorous scientific theology under the double constraint of the reality of god and the reality of the world of space and time careful attention is given to the common commitment of theological and natural science to objective knowledge and the deeply natural relation between knowledge of god the creator and knowledge of the world he has made stress is laid upon the stratified structure of theology and the need for a radical simplification and unification of christian doctrine is theology the Òscience of godÓ and is it concerned with objective knowledge like natural science is there a natural theology and how is it related to knowledge of god through divine relation how is the community of faith within which dogmatic theology arises related to the social coefficient of scientific inquiry what is the place of mysticism and of art in theology does theology have a special notion of truth and does it have its own inner logic and structure these are some of the main questions which this book seeks to answer

Reality and Scientific Theology 2001-11-28 if we wish to understand ourselves and the world in relation to god what contribution to our understanding should we expect from a christian tradition with its roots in the bible and what should we expect from the natural sciences neil messer sets out five types of answer to that question the responses range from the view that the christian tradition has nothing to contribute through various forms of dialogue to the claim that science is irrelevant to theological understanding this classification scheme is illustrated and tested by extended explorations of three topics in the science and theology field how to think about god s action in the world how to make theological sense of the suffering and destruction involved in the evolution of life and how theology should respond to the scientific study of religion the classification offers a way to understand and evaluate these debates and the discussion of specific examples demonstrates the strengths and weaknesses of each type of approach the book concludes with suggestions for how readers might use this scheme to guide their own work on science and theology for students and researchers in science and theology this book offers three things a tool for understanding specific debates in science and theology critical surveys of some of the most important debates in the field and a concise guide to ways of setting up encounters of theology with science

Science and Religion 2010-03-18 the last sixty years have witnessed a virtual explosion of interest in how modern science and traditional christianity intersect this new rapprochement with science has irrevocably altered how christians think of god providing a foundation from which we cannot retreat but from which we also cannot move forward until we examine the presumptions on which it is based for the first time richard j coleman interprets in a clear and meaningful way the themes and practitioners that make this rapprochement different and what it has achieved but this book is more than description it is an inquiry into whether christian theology has lost its authentic voice by its singular focus on accommodating modern science

Science in Theology 2020-07-23 the classic study which establishes a sound theological base for the future of philosophical science

The Relevance of Natural Science to Theology 1976-01-01 given the powerful and forthright title of andrew dickson white s classic study it is best to make clear his own sense of the whole as given in the original 1896 edition my conviction is that science though it has evidently conquered dogmatic theology based on biblical texts and ancient modes of thought will go hand in hand with religion and that although theological control will continue to diminish religion as seen in the recognition of a power in the universe not ourselves which makes for righteousness and in the love of god and of our neighbor will steadily grow stronger and stronger not only in the american institutions of learning but in the world at large white began to assemble his magnum opus a two volume work first published in 1896 as a history of the warfare of science with theology in christendom in correspondence he wrote that he intended the work to stake out a position between such religious orthodoxy as john henry newman s on one side and such secular scoffing as robert ingersoll s on the other historian paul carter declared that this book did as much as any other published work toward routing

orthodoxy in the name of science insofar as science and religion came to be widely viewed as enemies with science holding the moral high ground while inadvertently became one of the most effective and influential advocates for unbelief

Theological Science 1996-01-01 this book offers a rationale for a new ramified natural theology that is in dialogue with both science and historical critical study of the bible traditionally knowledge of god has been seen to come from two sources nature and revelation however a rigid separation between these sources cannot be maintained since what purports to be revelation cannot be accepted without qualification rational argument is needed to infer both the existence of god from nature and the particular truth claims of the christian faith from the bible hence the distinction between bare natural theology and ramified natural theology the book begins with bare natural theology as background to its main focus on ramified natural theology bayesian confirmation theory is utilised to evaluate competing hypotheses in both cases in a similar manner to that by which competing hypotheses in science can be evaluated on the basis of empirical data in this way a case is built up for the rationality of a christian theist worldview addressing issues of science theology and revelation in a new framework this book will be of keen interest to scholars working in religion and science natural theology philosophy of religion biblical studies systematic theology and science and culture

Key to the Science of Theology 2017-09-13 all sorts of things may be described as inspired a mathematical theorem a work of art a goal at football a short cut home from the shops what lies behind all these where does inspiration come from does it derive from a source external to the person inspired or is it the end result of sheer hard work or is it purely serendipitous within the fields of science and religion the word inspiration might be thought to carry very different connotations but is there a degree of overlap if scientists and religious thinkers alike may acknowledge the power of inspiration do we have here an important area of convergence between two important areas of human discourse which are all too often believed to be opposed to one another these were some of the issues considered at the 2011 conference of the science and religion forum held at Cumberland Lodge near Windsor this book presents papers from that conference including contributions from such major thinkers as Lord Winston Linda Woodhead and John Hedley Brooke among other leading scientific and theological practitioners their wide ranging studies and very diverse conclusions will be of interest to a wide readership

A History of the Warfare of Science the Theology 2019-03-08 every discussion of what is to be understood by biblical theology ought to proceed from a clear understanding of what theology is in general etymology in many cases a safer guide than a priori constructions tells us that theology is knowledge concerning god and this primitive definition is fully supported by encyclop dic principles only when making theology knowledge concerning god do we have the right to call it a separate science sciences are not formed at haphazard but according to an objective principle of division as in general science is bound by its object and must let itself be shaped by reality so likewise the classification of sciences the relation of the various members in the body of universal knowledge has to follow the great lines by which god has mapped out the immense field of the universe the title of a certain amount of knowledge to be called a separate science depends on its reference to such a separate and specific object as is marked off by these god drawn lines of distinction we speak of a science of biology because god has made the phenomena of life distinct from those of inorganic being now from this point of view we must say that no science has a clearer title to separate existence than theology between god as the creator and all other things as created the distinction is absolute there is not another such gulf within the universe god as distinct from the creature is the only legitimate object of theology
