the improvement of electrical energy efficiency is fast becoming one of the most essential areas of sustainability development backed by political initiatives to control and reduce energy demand now a major topic in industry and the electrical engineering research community engineers have started to focus on analysis diagnosis and possible solutions owing to the complexity and cross disciplinary nature of electrical energy efficiency issues the optimal solution is often multi faceted with a critical solutions evaluation component to ensure cost effectiveness this single source reference brings a practical focus to the subject of electrical energy efficiency providing detailed theory and practical applications to enable engineers to find solutions for electroefficiency problems it presents power supplier as well as electricity user perspectives and promotes routine implementation of good engineering practice key features include a comprehensive overview of the different technologies involved in electroefficiency outlining monitoring and control concepts and practical design techniques used in industrial applications description of the current standards of electrical motors with illustrative case studies showing how to achieve better design up to date information on standarization technologies economic realities and energy efficiency indicators the main types and international results coverage on the quality and efficiency of distribution systems the impact on distribution systems and loads and the calculation of power losses in distribution lines and in power transformers with invaluable practical advice this book is suited to practicing electrical engineers design engineers installation designers m e designers and economic engineers it equips maintenance and energy managers planners and infrastructure managers with the necessary knowledge to properly evaluate the wealth of electrical energy efficiency solutions for large investments this reference also provides interesting reading material for energy researchers policy makers consultants postgraduate engineering students and final year undergraduate engineering students

sustainable environmental control through building design heating cooling and lighting is the industry standard text on environmental control systems with the emphasis on sustainable design by detailing the many factors that contribute to the comfort in a building this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating cooling and lighting this new fourth edition includes new information on integrated design strategies and designing for the tropics resources include helpful case studies checklists diagrams and a companion website featuring additional cases an image bank and instructor materials designing buildings that require less energy to heat cool and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems basic design decisions regarding size orientation and form have a great impact on the sustainability cost and comfort of a building heating cooling and lighting provides detailed guidance for each phase of a design project readers will understand the concept of sustainability as applied to energy sources review the basic principles of thermal comfort and the critical role of climate learn the fundamentals of solar responsive design including active and passive solar systems as well as photovoltaics discover how siting architectural design and landscaping can reduce the requirements for mechanical and electrical systems in sustainable design mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself with this in mind designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort heating cooling and lighting is the complete industry leading resource for designers interested in sustainable environmental control

Lighting Design + Application

2009

a comprehensive introduction to the theory and practice of lighting design designing with light the art science and practice of architectural lighting design is a comprehensive introduction to the intelligent use of lighting to define and enhance a space the book explores all aspects of the process including aesthetics technology and practicalities in a clear concise manner designed to provide the reader with a full working knowledge of lighting design color illustrations throughout demonstrate the real world effects of the concepts presented and the companion website offers video animations and exercises to better illuminate the art and science of lighting the book addresses the considerations that should be a part of any designer s process and provides thorough guidance on meeting the various demands with smarter design lighting is an essential element of interior design and despite its ubiquity is difficult to truly master a designer with a fundamental and conceptual understanding of light is empowered to create simple typical spaces or work intelligently with lighting consultants on more complex projects designing with light contains special discussions on color light and health as well as the latest information on energy efficient lighting control systems and other technologies topics include physics psychology and perception of light current and future lighting technology communication documentation and the design process sustainability daylighting and energy efficiency the book also contains an entire chapter on building and energy codes as well as practical guidance on photometrics and calculations lighting can make or break an otherwise well designed space so designers need the background to be able to think intelligently about illumination factors during all stages of the process with comprehensive coverage and thorough explanation designing with light is a complete resource for students and professionals alike

Lighting Design + Application

the availability of electric lighting has changed the lives of people the world over yet as a major user of electricity it has come under increasing scrutiny in recent years this scrutiny has focused largely on the environmental consequences with little consideration of the benefits of lighting human factors in lighting third edition restores some balance to the discussion by examining the ways in which people interact with lighting these interactions influence the ability to perform visual tasks the perception of people objects and spaces human comfort and behavior as well as human health and safety it is only by understanding how to use light to achieve these ends that lighting can be provided effectively and efficiently to the benefit of all see what s new in the third edition new chapters on the non image forming system lighting for pedestrians light pollution and lighting and electricity use revision of all other chapters to update them to take into account the advances that have been made in our understanding of the effects of light on people over the last decade integration of the combined effects of light via the visual and non image forming systems on performance and perception the book covers both the visual and the non visual effects of light on people as well as the benefits of lighting and the costs it imposes on the environment it details the consequences of exposure to lighting or lighting technology and the role of exposure to light on such basic functions of the body as circadian rhythms the author combines information from many different sources and integrates them into a coherent overview of lighting practice that can be used to develop better lighting solutions at a lower environmental cost
