nowadays electrical force transducers in which various electrical conversion principles are applied are widely used transducers for forces from 1n till 10 mn are commercially available and used for industrial as well as research purposes they not only serve to measure forces but also for weighing purposes directly converting a force into an electrical signal is not possible this must be done step by step for instance in a strain gauge based transducer the conversion chain is force stress strain resistance change bridge output at every conversion point in this chain parasitic influences can interfere with the results and may cause a loss in accuracy to surmount the problems related to obtaining sufficient accuracy and reliability for these transducers much research has been done all over the world in the past 35 years as a result new materials new techniques improved constructional designs and compensation circuits have been found to overcome the parasitic influences the object of the imeko conferences on behalf of the technical

committee on measurement of force and mass tc 3 is to exchange experiences to discuss problems and to obtain knowledge about practical applications in this book the papers have been collected that will be discussed at the 11th international conference on measurement of force and mass the topic of this conference is mechanical problems in measuring force and mass

do you ever feel like a hamster spinning on a wheel in an endless loop and getting nowhere when it comes to your health and fitness are you working out regularly and cutting calories but seeing no real improvements does it feel like you will never lose those last 10 or 20 pounds or do you feel as if you simply don t have the time required to lose the fat and get into shape imagine if you could have the blueprint for the most efficient form of exercise to keep your body healthy and fit and an eating plan to satisfy hunger taste and health well now you can the best part it will only require 15 minutes of exercise twice a week paired with a controlled carb diet

and on the average you will lose 10 pounds of fat within five weeks it s hard to believe but it works and 15 minutes to fitness dr ben s smart plan for total fitness will not only show you how to do it but also explain why it works if this sounds like just another new exercise secret please be assured that it is most certainly not the foundation of this program is based on years of study observation and practice and it has delivered real measurable results in the overwhelming majority of those who have tried it dr vincent ben bocchicchio has spent the last 40 years in the fitness and health field and as he approaches 70 people are still shocked to hear that he only spends 14 minutes twice a week on working out but it s true with only 7 percent body fat he is often asked what the secret is and if there s a magic bullet the answer would be that the magic bullet is knowledge and now with this book you will understand why genetically our bodies require simple and limited exercise exposure and how you can follow this optimal pattern yourself the fact is that as humans we are hard wired to exercise our bodies in very specific ways to reap the highest level of health benefits i will provide the simple scientific argument for why my combination of high intensity exercise and controlled carbohydrate eating is the most effective means for burning fat so that you can better

understand exactly why this works exercise and diet are the two most powerful tools available for attaining high levels of health and function and 15 minutes to fitness will show you just how little it actually takes to achieve a maximum response

this book introduces the physical principles behind levitation with superconductors and includes many examples of practical magnetic levitation demonstrations using superconducting phenomena it features more than twenty examples of magnetic levitation in liquid nitrogen using high temperature superconductors and permanent magnets all invented by the author the book includes the demonstration of suspension phenomenon induced by magnetic flux pinning as well as magnetic levitation by the

meissner effect it shows how superconducting magnetic levitation and suspension phenomena fire the imagination and provide scientific insight and inspiration this book will be a useful experimental guide and teaching resource for those working on superconductivity and a fascinating text for undergraduate and graduate students

this dictionary of weighing terms is a comprehensive practical guide to the terminology of weighing for all users of weighing instruments in industry and science it explains more than 1000 terms of weighing technology and related areas numerous illustrations assist understanding the dictionary of weighing terms is a joint work of the german federal institute of physics and metrology ptb and mettler toledo the weighing instruments manufacturer special thanks go to peter brandes michael denzel and dr oliver mack of ptb and to richard davis of bipm who with their technical knowledge

have contributed to the success of this work the dictionary contains terms from the following fields fundamentals of weighing application and use of weighing instruments international standards legal requirements for weighing instruments weighing accuracy an index facilitates rapid location of the required term the authors welcome suggestions and corrections at mt com w eighing terms braunschweig de and greifensee ch the authors summer 2009 foreword since its founding in 1875 the international bureau of weights and measures bipm has had a unique role in mass metrology the definition of the kilogram depends on an artefact conserved and used within our laboratories the mass embodied in this tefact defines the kilogram and this information is disseminated throughout the world to promote uniformity of measurements although the definition of the kilogram may change in the re tively near future reflecting the success of new technologies and new requirements the task of ensuring world wide uniformity of mass measurements will remain

1 1 motivations deciding is a very complex and difficult task some people even argue that our ability to make decisions in complex

situations is the main feature that distinguishes us from animals it is also common to say that laughing is the main difference nevertheless when the task is too complex or the interests at stake are too important it quite often happens that we do not know or we are not sure what to decide and in many instances we resort to a decision support technique an informal one we toss a coin we ask an oracle we visit an astrologer we consult an expert we think or a formal one although informal decision support techniques can be of interest in this book we will focus on formal ones among the latter we find some well known decision support techniques cost benefit analysis multiple criteria decision analysis decision trees but there are many other ones sometimes not presented as decision support techniques that help making decisions let us cite but a few examples when the director of a school must decide whether a given student will pass or fail he usually asks each teacher to assess the merits of the student by means of a grade the director then sums the grades and compares the result to a threshold when a bank must decide whether a given client will obtain a credit or not a technique called credit scoring is often used
