*Application Videos in the Recruiting Process* 2019-07-16 seminar paper from the year 2018 in the subject leadership and human resources recruiting grade 1 0 technical university of munich chair of corporate management language english abstract new forms of applications are emerging with the introduction of image based communication in the application process the trend of application videos has the potential to reduce costs and risks for organizations among other considerable opportunities but this application type has not been popularly implemented by organizations in their recruiting processes yet however there is practically no scientific research on the use of these videos and whether and to what degree applicants accept this application trend for this term paper applicants aversion to application videos and potentially related constructs are empirically examined via an online survey with a sample of students from all over germany results show relatively high aversion to application videos among the participants but there are differences depending on the students fields of study correlation analysis reveals a weak negative correlation between video technology acceptance and aversion to application videos furthermore aversion to application videos is positively correlated with participants risk aversion whereas no significant correlation with job application experience was found this term paper emphasizes that applicants aversion to application videos is substantial and should therefore be carefully considered in the adoption of this trend it represents continuation of research on e selection solutions and builds a sound starting point for future research on application videos

**Proceedings of the Third International Network Conference (INC2002)** 2012-06-26 text for undergraduate graduate human resources and paralegal courses on employment law

Employment Law 2022-09-14 with the popularity of crime dramas like csi focusing on forensic science and increasing numbers of police and prosecutors making wide spread use of dna high tech science seems to have become the handmaiden of law enforcement but this is a myth asserts law professor and nationally known expert on police profiling david a harris in fact most of law enforcement does not embrace science it rejects it instead resisting it vigorously the question at the heart of this book is why eyewitness identifications procedures using simultaneous lineups showing the witness six persons together as police have traditionally done produces a significant number of incorrect identifications interrogations that include threats of harsh penalties and untruths about the existence of evidence proving the suspect s guilt significantly increase the prospect of an innocent person confessing falsely fingerprint matching does not use probability calculations based on collected and standardized data to generate conclusions but rather human interpretation and judgment examiners generally claim a zero rate of error an untenable claim in the face of publicly known errors by the best examiners in the u s failed evidence explores the real reasons that police and prosecutors resist scientific change and it lays out a concrete plan to bring law enforcement into the scientific present written in a crisp and engaging style free of legal and scientific jargon failed evidence will explain to police and prosecutors political leaders and policy makers as well as other experts and anyone else who cares about how law enforcement does its job where we should go from here because only if we understand why law enforcement resists science will we be able to break through this resistance and convince police and prosecutors to rely on the best that science has to offer justice demands no less

**Advances in Soft Computing** 2014-07-09 instructional design theory and practice has evolved over the past 30 years from an initial narrow focus on programmed instruction to a multidimensional field of study integrating psychology technology evaluation measurement and management the growth of instructional design id has occurred because of direct needs problems and goals from society its application in planning instruction first developed in the united states with the department of defense during world war ii with the purpose of meeting immediate concerns for effective training of larger numbers of military personnel from the beginning id has rapidly expanded into applications in industrial and executive training vocational training classroom learning and professional education although id has its roots in the u s applications and theoretical growth is an international activity however literature at the international level is still limited to either individual author contributions or collections primarily represented by single countries as a result there is no standard reference source that contains the rich variety of theories and applications to form the international foundation for the field the goal of this two volume set is to establish international foundations for id theory research and practice

within the framework of the two following objectives to identify and define the theoretical research and model foundations for id and to bridge the gap between id foundations and application volume i includes chapters on philosophical and theoretical issues on learning theory and id models volume ii provides an overview of the state of the art of solving id problems the contributors offer contrasting points of view which provide a rare opportunity to see the diversity and complexity in the field the editorial committee has selected a wide range of internationally known authors to make presentations in the topic areas of the field
