in the decade since the publication of the third series fascicle on tumors of the central nervous system many new entities have been described prognostic significance of certain tumor subtypes established grading systems revised and molecular features have been correlated with tumor types and grades drs burger and scheithauer have integrated all of these new findings as well as classical morphological clinical and neuroradiological descriptions and illustrations into an entirely new and completely up to date text atlas that demystifies the complex subject of cns tumors and tumor like lesions for the general pathologists the discussion of normal anatomy includes cytologic and radiologic correlations as do discussions of each of the common and rare cns lesions virtually all of the non radiographic illustrations are in color and references are current through 2006 and 2007 the 2007 world health organization classification is used throughout the fascicle in addition to encyclopedic coverage of cns neoplasms approximately 15 percent of the almost 600 text pages are devoted to the numerous benign tumor like lesions of various etiologies that may be mistaken for neoplasms a set of fifteen appendices is devoted to differential diagnostic algorithms which simplify the approach to a difficult specimen the authoritative yet user friendly approach of the authors has created a work that will be useful for many years to both

the rare occurrence of tumors of the facial skeleton whether of dental origin odontogenic or arising from bone osteogenic makes it impossible for a single observer to appreciate fully the epi demiologic and clinical behavior of these lesions even if he controls the case material of a large institution the systematic cooperation of many scientists is necessary in order to compile a meaningful body of information and make that information accessible for study on the initiative of one of the authors b s the german austrian swiss association for the study of tumors of the face and jaws dosak resolved in 1971 to establish a special registry for tumors of the facial skeleton including odontogenic lesions this registry has been integrated into the bone tumor registry at the swiss asso ciation for pathology in the department of pathology of the uni versity of basel in 1974 dosak sponsored a symposium on odontogenic and os teogenic tumors of the jaws at which illustrative cases were pre sented and discussed these discussions revealed the problematic nature of these tumors and prompted a number of reclassifications including some changes from benign to malignant and vice versa it was found that radical and in some cases mutilating operations would not have been justified on the basis of the new classification the discussions also underscored the importance of considering all factors epidemiologic clinical radiologic and pathohistologi when establishing a diagnosis

the chapters which comprise this book were prepared as part of a medical text pathology of the female genital tract which is intended for the obstetrician gynecologist and medical pathologist in that context we were concerned to bring out the importance of the study of tumors of the female reproductive tract of animals both as showing the variety of spontaneous neoplasms that might affect the tract and as providing tumors capable of experimental reproduction these chapters are published separately since they contain information which may appeal to a range of readers who might not necessarily wish to acquire the full medical text for example to veterinary and comparative pathologists cancer research workers research workers in gynecology experimental pathologists and endocrinologists and possibly to others using animals in experimental and pharmaceutical studies the survey of spontaneous tumors of the female reproductive tract is largely concerned with tumors of the ovaries and uterus of domesticated animals but attention is also given to laboratory animals wild animals and animals in zoos the spontaneous tumors are well worth studying not only because of their obvious clinical importance to veterinarians but also because they might provide a stimulus for epidemiologic etiologic biologic and therapeutic investigations that may elucidate some of the problems related to their counterparts in humans

here s your ideal reference on the diagnosis of tumors of the skeletal muscles connective tissue fat and  
related structures no other textbook matches its scope and depth of coverage in this complex and  
challenging area of surgical pathology and no other text contains as much practical information on  
differential diagnosis throughout microscopic findings are correlated with the latest developments in  
molecular biology cytogenetics and immunohistochemistry to provide you with a comprehensive and  
integrated approach to evaluation and diagnosis almost 2 000 superb illustrations capture the appearance  
of a complete range of entities and help relate these to their specific classifications the result is an  
essential resource for all who diagnose and treat soft tissue tumors get all the assistance you need in one  
reference to effectively diagnose these often complex and challenging entities confirm your diagnostic  
suspicions by comparing your findings to nearly 2 000 full color high quality illustrations representing the  
complete range of soft tissue tumors access all of the essential clinical and prognostic data necessary to  
formulate complete sign out reports make optimal use of relevant ancillary techniques such as  
immunohistochemistry and cytogenetics make rapid and effective decisions with the aid of extensive  
algorithms and access information at a glance with abundant tables and graphs solve difficult diagnostic  
dilemmas and avoid pitfalls with a special emphasis on overcoming these challenges find answers quickly

thanks to a new color coded page design as well as a consistent approach to every entity download all of the illustrations from the book for use in electronic presentations with the new bonus cd rom apply the latest knowledge on fna biopsy molecular biology and cytogenetics understand complex molecular events more fully thanks to new conceptual line drawings easily distinguish between entities that have a similar appearance with the assistance of new tables that correlate histologic immunohistochemical and molecular biologic findings navigate through the book quickly thanks to new summary outlines at the beginning of each chapter
