Inequalities 2012-01-06

this work is about inequalities which play an important role in mathematical olympiads it contains 175 solved problems in the form of exercises and in addition 310 solved problems the book also covers the theoretical background of the most important theorems and techniques required for solving inequalities it is written for all middle and high school students as well as for graduate and undergraduate students school teachers and trainers for mathematical competitions will also gain benefit from this book

Equations and Inequalities 2021-07-02

the book teaches the basics of solving equations and inequalities in easily understandable language one of the main topics is the solving of quadratic equations regardless of whether they already exist in normal form or have to be brought into it first the author treats the p q formula and the midnight formula as tools for this purpose in addition the book deals with linear equations and in general with the question of which manipulations one may make on an equation without changing its solutions furthermore the most important inequalities are treated and strategies for their solution are shown this springer essential is a translation of the original german 1st edition essentials gleichungen und ungleichungen by guido walz published by springer fachmedien wiesbaden gmbh part of springer nature in 2018 the translation was done with the help of artificial intelligence machine translation by the service deepl com a subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation springer nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors

Equilibrium Problems: Nonsmooth Optimization and Variational Inequality Models 2006-04-11

the aim of the book is to cover the three fundamental aspects of research in equilibrium problems the statement problem and its formulation using mainly variational methods its theoretical solution by means of classical and new variational tools the calculus of solutions and applications in concrete cases the book shows how many equilibrium problems follow a general law the so called user equilibrium condition such law allows us to express the problem in terms of variational inequalities variational inequalities provide a powerful methodology by which existence and calculation of the solution can be obtained

Distributive Justice and Inequality 2013-11-11

from may 20 to may 24 1986 a conference on distributive justice and in equality was held at the institute for advanced study berlin wis senschaftskolleg zu berlin more than thirty scholars participated in this conference the topics of the presentations ranged from ethics welfare economics and social choice theory to characterizations of inequality meas ures and redistributive taxation schemes this book contains a selection of the papers given at the conference this collection of articles also appeared as issues 2 and 3 of volume 5 of social choice and welfare in the first paper p suppes argues for a pluralistic concept of equity for too long the emphasis has been on income distribution but there are other characteristics which are important when one talks about equity suppes suggests that it would be desirable to have lorenz curves for a variety of fea tures of societies such as education health and housing p dasgupta studies the quality of lives in terms of an index of living stand ards one has to distinguish between same number choices the number of lives is given and different numbers choices problem of optimum population the author argues that in the latter case the anonymity or sym metry axiom cannot be readily defended once it is dropped however an incoherence in the moral ordering of possible worlds arises the moral basis for different numbers choices becomes generation dependent an overall moral ordering of possible worlds no longer exists

The Origins of Inequality 2016-08-20

this book presents a unified approach to the problem of inequality combining results from a variety of research fields the human life cycle group dynamics networks markets and economic geography its main message is that inequality emerges as the natural result of mechanisms operating both in individual human development and in social interaction it posits that inequality is not an anomalous deviation from a naturally egalitarian social structure quite to the contrary inequality is to be expected as part of the human condition the author states that the growth of inequality on the other hand is not a natural law the level and character of inequality can be affected by collective decisions this perspective on human inequality has potentially far reaching consequences both for the political philosophy of inequality and for public policy making this book is of interest to a wide interdisciplinary social science readership including public policy decision sciences economic geography and life course studies

Inequality in School Discipline 2014-07-07

this edited volume fills a critical void by providing the most current and authoritative information on what is known about disciplinary disparities school exclusion out of school suspension and expulsion in particular remains a substantial component of discipline in our nation s schools and those consequences continue to fall disproportionately on certain groups of learners the negative consequences of frequent and inequitable use of school exclusion are substantial including higher rates of academic failure dropout and contact with the juvenile justice system as educators policymakers community leaders and other youth serving organizations begin the difficult work of creating more equitable school disciplinary systems the need for effective disparity reducing alternatives could not be more important drawing on the multi year ground breaking work of the discipline disparities collaborative the chapters in this book provide cutting edge knowledge supporting a new national imperative to eliminate race gender disability and sexual orientation based disciplinary disparities

***Nonlinear Programming and Variational Inequality Problems* 2023-10-14**

since i started working in the area of nonlinear programming and later on variational inequality problems i have frequently been surprised to find that many algorithms however scattered in numerous journals monographs and books and described rather differently are closely related to each other this book is meant to help the reader understand and relate algorithms to each other in some intuitive fashion and represents in this respect a consolidation of the field the framework of algorithms presented in this book is called cost approximation the preface of the ph d thesis pat93d explains the background to the work that lead to the thesis and ultimately to this book it describes for a given formulation of a variational inequality or nonlinear programming problem an algorithm by means of approximating mappings and problems a principle for the update of the iteration points and a merit function which guides and monitors the convergence of the algorithm one purpose of this book is to offer this framework as an intuitively appeal ing tool for describing an algorithm one of the advantages of the framework or any reasonable framework for that matter is that two algorithms may be easily related and compared through its use this framework is particular in that it covers a vast number of methods while still being fairly detailed the level of abstraction is in fact the same as that of the original problem statement

Statistical Studies of Income, Poverty and Inequality in Europe 2016-06-21

Inequality and Economic Policies: Just Tax the Rich? 2012-12-06

persistent inequality and recurrent job insecurity the working class is right to complain since the 1970s a significant number of workers has been stuck in low wage jobs despite economic booms such as the reaganomics in the 1980s the dotcom boom in the 1990s and the housing boom of the 2000s these workers have not benefited from real wage increases instead they have faced unemployment and economic crises causing fear and uncertainty as during the economic crises of 1974 1982 1991 2001 2008 and 2020 in addition unaffordable housing has made it difficult for workers to move to cities with job opportunities while healthcare costs are a burden for many and college costs continue to rise leaving graduates in debt for years meanwhile the wealth and wage gaps between the rich and poor are widening which results in rising social discontent no solution in sight the issue of inequality has persisted for decades and there appears to be no unanimous solution in sight for the future worse the rise of robotics and artificial intelligence could exacerbate the issue as much as the costs associated with transitioning to green energy which all could disproportionately affect low income households this book aims to address fundamental questions surrounding the issue of inequality it will explore potential solutions as well as debunk naive proposals for the government to realistically address the issue despite the complex nature of the

issue it is essential to lay the foundations for finding a viable solution

Automated Inequality Proving and Discovering 2007-11-01

this is the first book that focuses on practical algorithms for polynomial inequality proving and discovering it is a summary of the work by the authors and their collaborators on automated inequality proving and discovering in recent years besides brief introduction to some classical results and related work in corresponding chapters the book mainly focuses on the algorithms initiated by the authors and their collaborators such as real root counting real root classification improved cad projection dimension decreasing algorithm difference substitution and so on all the algorithms were rigorously proved and the implementations are demonstrated by lots of examples in various backgrounds such as algebra geometry biological science and computer science contents preface basics of elimination method zero decomposition of polynomial system triangularization of semi algebraic system real root counting real root isolation real root classification open weak cad dimension decreasing algorithms sos decompositions successive difference substitution proving inequalities beyond the tarsi model readership researchers and graduate students in computational real algebraic geometry optimization and artificial intelligence

A Variational Inequality Approach to free Boundary Problems with Applications in Mould Filling 2001

this monograph studies an evolutionary variational inequality approach to a degenerate moving free boundary problem it takes an intermediate position between elliptic and parabolic inequalities and comprises an elliptic differential operator a memory term and time dependent convex constraint sets finally a description of injection and compression moulding is presented in terms of different mathematical models a generalized hele shaw flow a distance concept and navier stokes flow

Trade, Growth, and Inequality 2000-01-01

combining the fields of international trade theory economic development and economic growth this text provides an advanced exposition suitable for graduate students as well as researchers at all levels it combines mathematical rigour with an exceptional breadth of approaches including institutions history and comparative economics existing research is expositied and evaluated and numerous new results are included the central themes of economic inequality within and between nations are discussed as is convergence or the reduction of inequality distinctive features of the volume include a radical re evaluation of the theoretical basis of the economic convergence model proposed by barro and sala i martin a new generalization of the standard hos model and a new concept the economic environment designed to model the effects of institutions in a more analytical and micro founded manner is discussed uniquely the real world examples included focus not only on countries participating fully in globalized trade like china but also those countries and regions failing to fully participate specifically the arab world and sub saharan africa the text concludes with a discussion of current issues in world economic governance particularly the imf and limitations of the washington consensus showing that some criticism fails to confront fundamental difficulties

Negation and Control in Prolog 2011-11-13

the contributions to this volume cover all aspects of the assessment and management of hepatobiliary disease the focal points of the book consist of three state of the art summaries the first of these deals with the highly topical problem of liver transplants from the point of view of patient selection the second considers drug induced liver injury in view of the fact that the liver is the main metabolic site for a number of drugs the final summary deals with liver and aging it asks whether the liver follows the aging process of the host organisms and whether the liver of aged liver transplant candidate donors could be suitable for grafting aside from these topics the volume presents basic research on hepatic transport mechanisms intrahepatic cholestasis and gall stone disease which serves as a background for the topics more specifically concerning the assessment of liver function much of the book is then devoted to the management of the commonest forms of liver diseases and their complications such as chronic active hepatitis liver cirrhosis portal hypertension hepatic encephalopathy hepatorenal syndrome and ascites

Network Economics: A Variational Inequality Approach 1998

computational economics has been at the forefront in stimulating the development of mathematical methodologies for the analysis and solution of complex large scale problems the past decade in particular has witnessed a dramatic growth of interest in this area supported by the increasing availability of data and advances in computer architectures the scale and scope of problems that can now be handled are unveiling new horizons in both theoretical modeling and policy analysis accompanying the activity in computational economics is a need for the unification documentation and presentation of fundamental methodologies for use by both researchers and practitioners this volume aims to make a contribution in this direction the focus of this book is on network economics physical networks are pervasive in today's society be they in the form of transportation networks telecommunication networks energy pipelines electric power networks etc mathematical networks on the other hand may be used to represent not only physical networks but also interactions among economic agents in many applications the network representation of an economic equilibrium problem may be abstract in that the nodes of the network need not correspond to locations in space and the links of the network to trade or travel routes

Harnack's Inequality for Degenerate and Singular Parabolic

Equations 2005

degenerate and singular parabolic equations have been the subject of extensive research for the last 25 years despite important achievements the issue of the Harnack inequality for non negative solutions to these equations both of p Laplacian and porous medium type while raised by several authors has remained basically open recently considerable progress has been made on this issue to the point that except for the singular sub critical range both for the p Laplacian and the porous medium equations the theory is reasonably complete it seemed therefore timely to trace a comprehensive overview that would highlight the main issues and also the problems that still remain open the authors give a comprehensive treatment of the Harnack inequality for non negative solutions to p Laplace and porous medium type equations both in the degenerate $p \geq 2$ or $1 < p < 2$ and in the singular range $1 < p < 2$ or $0 < p < 1$

published in 1999 the liberalization process in Latin America during the 1990s resulted in the increase and diversification of trade in the region Brazil as a major player strengthened its insertion into the world economy through the adoption of strategies for opening up markets and of new production technologies complemented more recently by the creation of a broadly based stabilization plan in this context issues related to structural changes in the economy such as those involving the complexity of new international trading agreements and their impact on the Brazilian economy warrant special attention the results of this study suggest that the interplay of market forces in the Brazilian economy favour the more developed region of the country

Schaum's Outline of PreCalculus, 2nd Ed. 2014-02-27

this book offers an innovative interdisciplinary approach to thinking about inequality and to understanding how inequality is produced and reproduced in the global south without the safety net of the various northern welfare states inequality in the global south is not merely a socio economic problem but an existential threat to the social contract that underpins the democratic state and society itself only a response that is firmly grounded in the context of the global south can hope to address this problem this collection brings together scholars from across the globe with a particular focus on the global south to address broad thematic areas such as the conceptual and methodological challenges of measuring inequality the political economy of inequality in the global south inequality in work households and the labour market and inequalities in land spaces and cities the book concludes by suggesting alternatives for addressing inequality in the global south and around the world the pioneering ideas and theories put forward by this volume make it essential reading for students and researchers of global inequality across the fields of sociology economics law politics global studies and development studies

Inequality Studies from the Global South 2023-09-16

a theft amounting to 1 was a capital offence in 1260 and a judge in 1610 affirmed the law could not then be applied since 1 was no longer what it was such association of money with a date is well recognized for its importance in very many connections thus arises the need to know how to convert an amount at one date into the right amount at another date in other words a price index the longstanding question concerning how such an index should be constructed is known as the index number problem the ordinary consumer price index represents a practical response to this need however the search for a true price index has given rise to extensive thought and theory to which an impressive number of economists have each contributed a word or volume however there have been hold ups at a basic level which are addressed in this book the approach brings the subject into involvement with utility construction on the basis of finite data in a form referred to as afriat s theorem but now with utility subject to constant and also possibly approximate returns

The Index Number Problem 2015-12-01

this book bridges the disciplines of micro economics and social policy in general and in particular behavioral explanatory social policy and public choice theory plus leibenstein s x efficiency theory being trained as an economist and social policy scientist the author leaps out of the comfort zone of most social policy scientists and experts right into the exciting world of micro economic theory and then extending and connecting those theories to explain major social political and economic conundrums of our time in doing so the book offers a new set of theoretical and practical explanations derived from the general proposition of micro economic theory of how government officers policymakers administrators and the people themselves alike are by and large motivated in their daily as well as strategic long term decision making using a meta analytical approach based on a number of grand theories this book also explains systemic factors behind human behavior and the thereof resulting shortcomings in lifetime outcomes health wealth and happiness of a person and at the same time societal policy making and economic outcomes on societal level and in global comparison the outcomes thereof can be measured exactly and hence validated especially through the method of empirical comparative social science economic research here the author also but not only introduces the new method of using aspalter s standardized relative performance srp index in measuring exactly complex aggregate performances of multiple governments and that at the same time also across the entire world

Super Inequality: Theoretical Essays in Economics and Social Policy 2018-11-09

drawing from a 2014 hoover institution conference on inequality in honor of gary becker a group of distinguished contributors explore various measures of inequality in america and address the issue of whether or not it is increasing in looking at this question and examining policy implications the authors draw on research on human capital and intergenerational mobility the authors suggest that the emphasis on inequality and redistribution while not wrong is nevertheless misplaced for it may lead us to adopt policies that will disrupt the progress we have made while doing nothing to promote the kind of growth that is essential to national progress
