dictionaries are didactic books used as consultation instruments for self teaching they are composed by an ordered set of linguistic units which reflects a double structure the macrostructure which correspond to the word list and the microstructure that refers to the contents of each lemma the great value of dictionaries nests in the fact that they establish a standard nomenclature and prevent in that way the appearance of new useless synonyms this dictionary contains a total of about 27 500 main english entries and over of 130 000 translations that should normally sufficiently cover all fields of life sciences the basic criteria used to accept a word a part of the dictionary during the development period in order of importance were usage up to dateness specificity simplicity and conceptual relationships the dictionary meets the standards of higher education and covers all main fields of life sciences by setting its primary focus on the vastly developing fields of cell biology biochemistry molecular biology immunology developmental biology microbiology genetics and also the fields of

human anatomy histology pathology physiology zoology and botany the fields of ecology paleontology systematics evolution biostatistics plant physiology plant anatomy plant histology biometry and lab techniques have been sufficiently covered but in a more general manner the latest latin international anatomical terminology terminologia anatomica or ta has been fully incorporated and all anatomical entries have been given their international latin ta synonym this dictionary will be a valuable and helpful tool for all scientists teachers students and generally all those that work within the fields of life sciences

this is the first book to focus on the topological index the harary index of a graph including its mathematical properties chemical applications and some related and attractive open problems this book is dedicated to professor frank harary 1921 2005 the grandmaster of graph theory and its applications it has be written by experts in the field of graph theory and its applications for a connected graph g as an important distance based topological index the harary index h g is defined as the sum of the reciprocals of the distance between any two unordered vertices of the graph g in this book the authors report on the newest results on the harary index of a graph these results mainly concern external graphs with respect to the harary index the relations to other topological indices its properties and applications to pure graph theory and chemical graph theory and two significant variants i e additively and multiplicatively weighted harary indices in the last chapter we present a number of open problems related to the harary index as such the book will not only be of interest to graph researchers but to mathematical chemists as well

this monograph provides a coherent development of operads infinity operads and monoidal categories equipped with equivariant structures encoded by an action operad a group operad is a planar operad with an action operad equivariant structure in the first three parts of this monograph we establish a foundation for group operads and for their higher coherent analogues called infinity group operads examples include planar symmetric braided ribbon and cactus operads and their infinity analogues for example with the tools developed here we observe that the coherent ribbon nerve of the universal cover of the framed little 2 disc operad is an infinity ribbon operad in part 4 we define general monoidal categories equipped with an

action operad equivariant structure and provide a unifying treatment of coherence and strictification for them examples of such monoidal categories include symmetric braided ribbon and coboundary monoidal categories which naturally arise in the representation theory of quantum groups and of coboundary hopf algebras and in the theory of crystals of finite dimensional complex reductive lie algebras

following in the tradition of its predecessor crop responses to environment this fully updated and more comprehensive second edition describes aspects of crop responses to environment that are particularly relevant to the development of improved crop cultivars and management methods on a global scale it includes an extensive discussion of the difficulties in developing agricultural systems that accommodate increasing human needs for agricultural products during the twenty first century in a sustainable manner the book features new sections on adaptation to global climate change including adapting to global warming elevated atmospheric carbon dioxide concentration and increased flooding and salinity through plant breeding and changes in crop management warming effects include stressful effects of heat on pollen development and reduced winter chilling effects on fruit and nut trees the book examines principles theories mathematical models and experimental observations concerning plant responses to environment that are relevant to the development of improved crop cultivars and management methods it illustrates the importance of considering emergent plant properties as well as reductionist approaches to understanding plant function and adaptation plant physiological and developmental responses to light and temperature and plant water relations are considered in detail dr hall also describes climatic zone definitions based on temperature rainfall and evaporative demand in relation to plant adaptation and the prediction of crop water use irrigation management and crop responses to salinity flooding and toxic levels of boron and aluminum are considered crop responses to pests and diseases as they interact with crop responses to physical and chemical aspects of the environment are examined the book concludes with analyses illustrating the relevance of crop responses to environment to plant breeding

presently people are facing a condition called vuca volatility uncertainty complexity and ambiguity where this condition is described as a turbulent uncertain complicated unclear condition the world of work and industry is changing quickly driven by the development of technology information and communication advances in computer technology artificial intelligence robotics which is also called as the industrial revolution 4 0 eras are of significant influence on environment and people a time where humans must learn quickly and an era where the future is unpredictable where choices for various conditions are increasing and mindsets are changing the big challenge for educational institutions especially islamic educational institutions today is how to prepare young people on various aspects of cognitive mental and spiritual preparedness to face the changing environment development in the real world is far more complex than what is learned in the classroom so it is necessary to educate and transform curriculum that is directed in accordance with the demands of present times the 6th international conference on emerging trends in technology for education in facing vuca volatility uncertainty complexity and ambiguity is designed not only to share research but also to offer recommendations to governments educational institutions and other stakeholders to improve the quality of education through technology based educational programs the conference was held by faculty of education uin syarif hidayatullah jakarta scholars researchers policy makers teachers and students from various countries participated and worked together to

discuss how to improve the quality of education in the muslim community guided by uin jakarta the 6th icems of 2020 provided opportunities for various educational stakeholders especially in muslim communities around the world to share their creative and innovative works opinions and experiences in open academic forums

carbon dioxide accumulation in the atmosphere as the result of fossil fuel emissions and land use change especially tropical deforestation threatens to cause global warming and climatic change one means of reducing the increase in atmospheric carbon dioxide is through its capture by photosynthesis and storage sequestration in soil the quantities of carbon that can be sequestered during the next century are enough to offset two or three decades worth of carbon emissions at the current rate the book deals with four issues that must be addressed before soil carbon sequestration programs can be implemented on a large scale new science monitoring and verification the soil carbon sequestration desertification linkage and policy and implementation issues contents include science needs and new technology for soil carbon sequestration monitoring and verifying soil organic carbon sequestration desertification control to sequester c and mitigate the greenhouse effect soil carbon policy and economics science needs and new technologies monitoring and verifying desertification
