medicine physicians nurses and other allied health professionals readers of evidence based emergency care diagnostic testing and clinical decision rules third edition will also earn a place in the libraries of administrators and managers in healthcare settings seeking to optimize the use of scarce resources while maintaining the highest standards of care mental health in emergency care takes a practical scenario based approach to help students and recent graduates hone their knowledge and skills to address the mental health needs of people presenting to emergency care settings featuring typical presentations across community pre hospital and hospital contexts the scenarios demonstrate how clinicians can identify underlying mental health issues that can often go undetected and contribute to poor health outcomes mental health in emergency care provides a framework for thinking about mental health in emergency settings and how to develop mental health knowledge and skills that can be applied in order to provide more holistic care to all patients emphasis on mental health core principles for practice recovery person centered trauma informed care collaborative practice cultural safety focus on essential mental health nursing skills and the importance of mental health triage and assessment as part of a comprehensive approach 18 scenarios written for clinicians by clinicians based on typical presentations across community pre hospital and hospital contexts red flags for possible mental health issues provide practical support includes lived experience perspectives for in depth understanding provides relevant information on what to say and what to do in an emergency setting a focus on self care within emergency care settings an ebook included with print purchase responding for life is a self directed study guide of case studies in emergency care it integrates the theoretical knowledge of prehospital emergency medicine with the critical thinking skills of assessment and intervention during medical emergencies hospital staff and emergency medical services ems providers can face barriers in delivering the fastest and best possible care overcrowded emergency rooms cannot care for patients as quickly as necessary and some may divert ambulances and turn away new patients outright in many states ambulance staff lacks the means to determine which hospitals can provide the best care to a patient given this absence of knowledge they bring patients to the closest hospital in addition because emergency service providers from different companies compete with each other for patients and emergency care legislation varies from state to state it is difficult to establish the necessary local interstate and national communication and collaboration to create a more efficient system in 2006 the iom recommended that the federal government implement a regionalized emergency care system to improve cooperation and overcome these challenges in a regionalized system local hospitals and ems providers would coordinate their efforts so that patients would be brought to hospitals based on the hospitals capacity and expertise to best meet patients needs in september 2009 three years after making these recommendations the iom held a workshop sponsored by the federal emergency care coordination center to assess the nation s progress toward regionalizing emergency care the workshop brought together policymakers and stakeholders including nurses ems personnel hospital administrators and others involved in emergency care participants identified successes and shortcomings in previous regionalization efforts examined the many factors involved in successfully implementing regionalization and discussed future challenges to regionalizing emergency care this document summarizes the workshop this book for emergency physicians and fellows training in emergency medicine provides evidence based information on what diagnostic tests to ask for and when and how to use particular decision rules the new edition builds on the success of

the current book by modifying the presentation of the evidence increasing the coverage and updating the current information throughout an excellent comprehensive clinical reference thoughtfully Regionalizing Emergency Care 2010-07-01

during medical emergencies hospital staff and emergency medical services ems providers can face barriers in delivering the fastest and best possible care overcrowded emergency rooms cannot care for patients as quickly as necessary and some may divert ambulances and turn away new patients outright in many states ambulance staff lacks the means to determine which hospitals can provide the best care to a patient given this absence of knowledge they bring patients to the closest hospital in addition because emergency service providers from different companies compete with each other for patients and emergency care legislation varies from state to state it is difficult to establish the necessary local interstate and national communication and collaboration to create a more efficient system in 2006 the iom recommended that the federal government implement a regionalized emergency care system to improve cooperation and overcome these challenges in a regionalized system local hospitals and ems providers would coordinate their efforts so that patients would be brought to hospitals based on the hospitals capacity and expertise to best meet patients needs in september 2009 three years after making these recommendations the iom held a workshop sponsored by the federal emergency care coordination center to assess the nation s progress toward regionalizing emergency care the workshop brought together policymakers and stakeholders including nurses ems personnel hospital administrators and others involved in emergency care participants identified successes and shortcomings in previous regionalization efforts examined the many factors involved in successfully implementing regionalization and discussed future challenges to regionalizing emergency care this document summarizes the workshop
