Epidemiology and Public Health 1923 non communicable diseases have surpassed infectious
diseases as the leading cause of morbidity and mortality in developed countries prevention and
treatment of the causes and consequences of lifestyle related diseases forms an important part of
health policy in the twenty first century public health economics from quantifying the problem
to evaluating interventions and developing toolkits to assist decision makers is an essential area for
any postgraduate student and researcher with an interest in applied economics to understand there
are a wide range of techniques from mainstream economics and health economics that can be
applied to the evaluation of public health policy and public health issues in this book brown
presents examples from developed countries to illustrate how economic tools can be applied to
public health further cross country comparisons illustrate how contextual factors related to
healthcare systems demographics and environmental factors may impact on outcomes and the cost
effectiveness of public health policies in order to aid understanding and help students apply theory
into practice
