byod is the abbreviation for bring your own device byod stands for the global trend in which employees of organizations are using their personally owned devices for the purpose of accomplishing work related tasks in practice byod is a major concern for an organization s security and causes a number of challenges when it is introduced officially into organizations there are also positive aspects of this trend like increased employee productivity in literature there are a number of recommendations concerning the introduction of byod but unfortunately the focus is on particular aspects only the aim of this thesis is to introduce an overall management framework for the introduction of byod which guides organizations to implement byod successfully and decrease the security issues at the same time the research starts with a review of existing literature such as magazines practitioner papers and study reports in order to identify management frameworks in regard to byod as there is no overall management framework for the introduction of byod the goal of this thesis is aiming at introducing one the review resulted in a design theory in which meta requirements are derived from the implementation challenges of byod which lead to the design principles

and the overall management framework the research process includes interviews with byod experts the interviews consist each of an explorative and an evaluative part finally this thesis contributes to the knowledge base of byod and gives practitioners a compendium for the introduction of byod
