students and practitioners alike scholars researchers and students of personal relationship development will recognize in this book the first serious attempt in over 40 years to do a large scale longitudinal study of premarital factors that predict premarital breakup and marital quality they should also appreciate our attempt to develop a theoretical rationale for predicted paths and to test those paths with the best available statistical tools practitioners while generally not as interested in the intricacies of the statistical results will find much that is useful to them as they help individuals and couples make decisions about their intimate relationships their readiness for marriage and how to increase the probability for marital success teachers family life educators premarital counselors and clergy will find helpful our principles for practice particularly as described in chapter 9 as they teach and counsel couples in any premarital situation my interest in the development of relationships from premarital to marital probably began when i got married in 1972 and started to notice all of the characteristics my wife and i brought from our respective families and how our new beginning as a married couple was in many ways the continuation of our premarital relationship only more refined and more intense my professional interest began when i did my doctoral dissertation in 1981 on premarital predictors of early marital satisfaction the results of that study are reported in chapter 8 a journal devoted to banking law and practice for bankers and bank attorneys includes articles notes on court cases and summaries of legislation the target oriented curriculum toc is arguably the most comprehensive fundamental and controversial attempt to promote systemic curriculum reform in hong kong it aimed at a radical change in the nature of knowledge pedagogy and assessment in schools after an initial phase of confusion and criticism this ambitious reform was revamped and vigorously promoted but within a few years it totally lost momentum as other educational issues attracted the attention of policy makers this book traces the career of toc and studies the impact of the reform on the education system subjects schools and teachers drawing on a four year multi level research project the chapters provide a deep understanding of the complex nature of educational reform and how a new curriculum is interpreted developed and implemented besides providing a fascinating portrayal of the experiences of the toc reform this book offers lessons for future curriculum change in hong kong and elsewhere this writes ivor goodson in the foreword is curriculum research at its best october 19th 1987 was a day of huge change for the global finance industry on this day the stock market crashed the nobel prize winning black scholes formula failed and volatility smiles were born and on this day elie ayache began his career on the trading floor of the french futures and options exchange experts everywhere sought to find a model for this event and ways to simulate it in order to avoid a recurrence in the future but the one thing that struck elie that day was the belief that what actually happened on 19th october 1987 is simply non reproducible outside 19th october 1987 you cannot reduce it to a chain of causes and effects or even to a random generator that can then be reproduced or represented in a theoretical framework the blank swan is elie s highly original treatise on the financial markets presenting a totally revolutionary rethinking of derivative pricing and technology it is not a diatribe against nassim taleb s the black swan but criticises the whole background or framework of predictable and unpredictable events white and black swans alike i e the very category of prediction in this revolutionary book elie redefines the components of the technology needed to price and trade derivatives most importantly and drawing on a long tradition of philosophy of the event from henri bergson to gilles deleuze to alain badiou and on a recent brand of philosophy of contingency embodied by the speculative materialism of quentin meillassoux elie redefines the market itself against the common perceptions of orthodox financial theory general equilibrium theory and the sociology of finance this book will change the way that we think about derivatives and approach the market if anything derivatives should be renamed contingent claims where contingency is now absolute and no longer derivative and the market is just its medium the book also establishes the missing link between quantitative modelling no longer dependent on probability theory but on a novel brand of mathematics which elie calls the mathematics of price and the reality of the market vibrants newest edition of gre text completion and sentence equivalence practice questions is just the solution for all test takers who are worried about cracking these questions with
