ventilation with the latest innovations in ventilatory assistance and improve outcomes and quality of life in newborns worldwide more than one million babies die annually from perinatal asphyxia and its associated complications such as neonatal encephalopathy one of the major causes of cerebral palsy and cognitive deficiencies in children aside from prematurity cooling the head or the entire body minimizes neuronal death enabling the neonatal brain to be rescued thus greatly improving developmental outcomes hypothermic neural rescue therapy has revolutionized the treatment of this condition and is a major recent achievement in neonatal medicine this landmark book provides a brief scientific underpinning of hypothermic neural rescue therapy and lays out the evidence base for good practice internationally recognized authorities give practical advice drawn from personal experience on how to deliver hypothermia in the neonatal intensive care unit a valuable addition to any neonatal unit this is essential reading for neonatologists neonatal nurses and paediatric neurologists organized into three main sections i nutrition and the well child ii nutrition and the hospitalized child and iii nutrition and specific disease states the manual covers the basics of nutrition assessment nutritional requirements and feeding guidelines for healthier infants children and adolescents oral health and food assistance programs are also reviewed along with the use of specialized enteral and parenteral products in the treatment of sick children a wide range of pediatric clinical disorders are included in the section on specific diseases the third edition of the labor progress handbook builds on the success of first two editions and remains an unparalleled resource on simple non invasive interventions to prevent or treat difficult labor retaining the hallmark features of previous editions the book is replete with illustrations showing position movements and techniques and is help families deal with the emotional impact of caring for a premature infant access a list of disease specific websites for clinicians and families although the benefits of psychological consultation in the pediatric setting are well established a gap often exists between the demand for these services and funding we have embarked on our longstanding goal to develop a group based intervention model for parents of premature infants adapting our manual of individual trauma focused cognitive behavioral therapy to help reduce feelings of parental isolation this book describes a more global approach to psychological consultation in the nicu integrating interventions that begin prior to the infant s conception and extend well beyond the nicu hospitalization chapter 1 provides a context and review of the medical aspects of the nicu environment and the neurodevelopmental consequences of prematurity in chapter 2 reviews the common psychological reactions of mothers of premature infants including specific risk factors associated with maternal psychological distress it also discusses the relationship between parental posttraumatic stress and infant outcomes as it relates to such issues as breastfeeding maternal infant interaction attachment and infant development chapter 3 describes the form and prevalence of symptoms of paternal psychological distress and outline a curriculum for a group based intervention specifically designed to address fathers concerns chapter 4 addresses developmental care interventions that overlap with interventions more narrowly focused on parental psychological distress chapters 5 and 6 describe our intervention model in both the individual and group therapy formats chapter 7 addresses vulnerable child syndrome which is associated with adverse developmental outcomes in children as well as overutilization of health care resources application of the trauma model to the concept provides a framework to understand how parental behavior is altered in the context of trauma finally chapter 8 discusses how to implement a psychological intervention program in the nicu that includes screening the parents of premature infants for symptoms of psychological distress community based primary care physicians are routinely challenged as they stabilize evaluate and care for term and late preterm neonates although there have been many spectacular advances in care of neonates the challenges and successes of caring for the most preterm very low birth weight newborns seem to dominate presentations and the pediatric
