## ***Making a Green Machine***

**2011-07-11**

consider an empty bottle or can one of the hundreds of billions of beverage containers that are discarded worldwide every year empty containers have been at the center of intense political controversies technological innovation processes and the modern environmental movement making a green machine examines the development of the scandinavian beverage container deposit refund system which has the highest return rates in the world from 1970 to present finn arne jørgensen investigates the challenges the system faced when exported internationally and explores the critical role of technological infrastructures and consumer convenience in modern recycling his comparative framework charts the complex network of business and political actors involved in the development of the reverse vending machine rvm and bottle deposit legislation to better understand the different historical trajectories empty beverage containers have taken across markets including the u s the rvm has served as more than a hole in the wall it began simply as a tool for grocers who had to handle empty refillable glass bottles but has become a green machine to redeem the empty beverage container helping both business and consumers participate in environmental actions

## **No Deposit, No Return-- 1975**

this study is a resource and environmental profile analysis  
repa of nine beverage container options the analysis

repair manual

encompassed seven different parameters virgin raw materials use energy use water use industrial solid wastes post consumer solid wastes air pollutant emissions and water pollutant effluents these parameters were assessed for each manufacturing and transportation step in the life cycle of a container beginning with extraction of the raw materials from the earth continuing through the materials processing steps product fabrication use and final disposal the nine container systems encompass four basic raw materials glass steel aluminum and plastic a fifth basic material is also included in packaging of the containers this material is paper p 1

## **The Beverage Container Problem** **1972**

beverage container deposit systems in the united states outlines the provisions of existing state deposit laws and amendments being considered as of 2003 included in the report is information on beverage container return rates in deposit states public approval and the impact of deposit systems on curbside recycling solid waste recycling rates and litter reduction the 50 page publication also includes government and public interest contacts for each deposit state information on unclaimed deposits and a section on expanding existing bottle bills to include non carbonated beverages wine and spirits
