New Advances in Grit Research: A Multidisciplinary Perspective

2022-09-20

in recent years there have been great advances in the fields of laboratory and astronomical spectroscopy these have been equally matched by large scale computations using state of the art theoretical methods the accurate atomic opacities that are available today play a great role in the field of biomedical research using nanotechnology the proceedings of the international conference on recent advances in spectroscopy theoretical experimental and astrophysical perspectives contain both invited and contributory papers which give the most recent results by the peers in the areas of theoretical and experimental atomic physics as well as observational astrophysics

Recent Advances in Spectroscopy

drug repositioning is the process of identifying new indications for existing drugs at present the conventional de novo drug discovery process requires an average of about 14 years and us 2 5 billion to approve and launch a drug drug repositioning can reduce the time and cost of this process because it takes advantage of drugs already in clinical use for other indications or drugs that have cleared phase i safety trials but have failed to show efficacy in the intended diseases historically drug repositioning has been realized through serendipitous clinical observations or improved understanding of disease mechanisms however recent technological advances have enabled a more systematic approach to drug repositioning this ebook collects 16 articles from 112 authors providing readers with current advances and future perspectives of drug repositioning

Drug Repositioning: Current Advances and Future Perspectives 2019-01-11

modern advances in tourism research provides a thorough assessment of state of the art academic research in this field of economic science the authors start by scoping the scene of tourism research they progress to a comprehensive analysis of themes of particular interest

volume 34 of the advances in child development and
behavior series is divided into eight components that
highlight some of the most recent research in
developmental and educational psychology a wide array
of topics are discussed in detail including social
stereotypes and prejudice phonetic and lexical learning
poverty the development of moral thinking and others
each component provides in depth discussions of various
developmental psychology specializations this volume
serves as an invaluable resource for psychology
researchers and advanced psychology students goes in
depth to address eight different developmental and
educational psychology topics a necessary resource for
both psychology researchers and students

Advances in Child Development and Behavior 2011-07-29

the management of and attitudes toward children and adults with down syndrome have undergone considerable changes in the course of the condition's long history zellweger 1977 1981 zellweger patil 1987 j e d esquirol 1838 and e seguin 1846 were probably the first physicians to witness the condition without using currently accepted diagnostic designations seguin coined the terms furfuraceous or lowland cretinism in contradistinction to the goiterous cretinism endemic at that time in the swiss alps esquirol as well as seguin had a positive attitude toward persons who were mentally ill or mentally subnormal esquirol pioneered a more humane treatment in mental institutions and seguin created the first homes in france and later in the united states aimed at educating persons who were mentally subnormal the term mongolian idiocy was coined by j h l down in england 1866 the term is misleading in several respects 1 down identified the epicanthic folds seen in many children with down syndrome with the additional skin fold in the upper lid occurring particularly in people of oriental mongolian descent and 2 down also erred by assuming that down syndrome represented regression to an ethnic variant of lower cultural standing such an interpretation might have been understandable at a time when the myth of anglo saxon superiority was widely accepted by the british charles darwin's then highly acclaimed theory of origin of the species may have contributed to such a concept

Clinical Perspectives in the

the language communication society triangle defies traditional scientific approaches rather it is a phenomenon that calls for an integration of complex transdisciplinary perspectives if we are to make any progress in understanding how it works the highly diverse agents in play are not merely cognitive and or cultural but also emotional and behavioural in their specificity indeed the effort may require building a theoretical and methodological body of knowledge that can effectively convey the characteristic properties of phenomena in human terms new complexity approaches allow us to rethink our limited and mechanistic images of human societies and create more appropriate emotional cognitive dynamic and holistic models we have to enter into dialogue with the complexity views coming out of other more material sciences but we also need to take steps in the linguistic and psycho sociological fields towards creating perspectives and concepts better fitted to human characteristics our understanding of complexity is different but not opposed to the one that is more commonly found in texts written by people working in physics or computer science for example the goal of this book is to extend the knowledge of these other more human or socially oriented perspectives on complexity taking account of the language and communication singularities of human agents in society our understanding of complexity is different but not opposed to the one that is more commonly found in texts written by people working in physics or computer science for example the goal of this book is to extend the knowledge of these other more human or socially oriented perspectives on complexity taking account of the language and communication singularities of human agents in society
