heading toward omega breaks new ground in near death studies by focusing on the meaning of the near death experience for the survivor and for human evolution a near death experience or nde which an estimated eight million americans have had occurs when a person is clinically dead but then survives and reports such phenomena as floating out of the body entering a dark tunnel reviewing a life panorama and encountering a brilliant white light such accounts have been described in best sellers by raymond a moody and elisabeth kübler ross and in kenneth ring s previous book life at death they were documented for the first time dr ring s intensive three year search for the meaning of the near death experience has been pursued through both scientifically designed questionnaires completed by hundreds of experiencers and wide ranging interviews many with persons who have reported unusually deep ndes from which he quotes frequently and copiously from this study emerges a provocative pattern of very positive changes in outlook values and behavior following a near death experience often a complete transformation of personality dr ring also finds that ndes are often powerful catalysts for spiritual awakening and psychic development moreover deep ndes frequently include strikingly similar visions of our planetary future the depth and consistency of these life transformations as well as the apparent

widespread and increasing incidence of the nde itself lead dr ring to a startling conclusion near death experiences may be part of an evolutionary thrust toward higher consciousness for all humanity thus they may foreshadow the birth of a new planetary consciousness as we head toward omega the final goal of human evolution front and back flaps

Coming Back to Life 1988

the scientific evidence for life after death explains why near death experiences ndes offer evidence of an afterlife and discredits the psychological and physiological explanations for them challenges materialist arguments against consciousness surviving death examines ancient and modern accounts of ndes from around the world including china india and many from tribal societies such as the native american and the maori predating all organized religion the belief in an afterlife is fundamental to the human experience and dates back at least to the neanderthals by the mid 19th century however spurred by the progress of science many people began to question the existence of an afterlife and the doctrine of materialism which believes that consciousness is a creation of the brain

began to spread now using scientific evidence chris carter challenges materialist arguments against consciousness surviving death and shows how near death experiences ndes may truly provide a glimpse of an awaiting afterlife using evidence from scientific studies quantum mechanics and consciousness research carter reveals how consciousness does not depend on the brain and may in fact survive the death of our bodies examining ancient and modern accounts of ndes from around the world including china india and tribal societies such as the native american and the maori he explains how ndes provide evidence of consciousness surviving the death of our bodies he looks at the many psychological and physiological explanations for ndes raised by skeptics such as stress birth memories or oxygen starvation and clearly shows why each of them fails to truly explain the nde exploring the similarities between ndes and visions experienced during actual death and the intersection of physics and consciousness carter uncovers the truth about mind matter and life after death

the near death experience is a life changing event survivors of near death return to earth secure in the knowledge that consciousness endures in a world even more real than this one they speak of visiting a place of indescribable beauty and of being engulfed by a love that defies description

upon their return survivors are not the same person they were before their nde they are more tolerant and kind they seek to emulate the love they felt on the other side almost all lose their fear of death as wonderful and as life changing as these experiences are however they ve only been experienced by 5 of the population which leaves the rest of us out in the cold but we don t have to remain in the cold as i was reading about the changes in the lives of nde survivors it occurred to me that their stories were having an effect on me too just by reading about them i discovered that i was subtly changing for the better it was becoming a little easier to be tolerant and understanding patience and forgiveness were coming more readily i was slowly losing my fear of death and that s when i had an epiphany if an nde can transform a life maybe i can make some much needed changes in my life too but without having to go through the trauma of dying i realized that i don t have to die to learn from those who have that s the essence of death therapy benefitting from the near death experiences of others without the inconvenience of dying ourselves so join me in therapy death therapy it s a guaranteed cure

listen to the audio book you will find that i agree with melvin morse m d that near death experiences are simply natural signs not paranormal that many scientists continue to ignore until october 2 2015 my study of near death experiences in search of the light was primarily on the research of raymond moody m d melvin morse m d pim van lommel m d kenneth ring ph d and bruce greyson m d who developed a list of nine stages of the near death experience that list plus eadie s twelve stages points in her personal near death experience was the focus of my search for the light in the near death experience then i came across j steve miller s website character education info i saw his book near death experiences as evidence for the existence of god and heaven his presentation of dr pim van lommel s in a dutch hospital is included in the book during the same search to update my near death information i found a researcher i was totally unacquainted with p m h atwater who had been actively engaged in near death research since 1978 she used an interview technique based on police investigations learned from her father there are 3 000 adult experiencers and 277 child experiencers in her research base read chapter two of her 2011 near death experiences the rest of the story for the details she discovered four distinctive patterns of the near death experience these are presented in the e book audio book atwater had never heard of raymond moody or his book until kenneth ring told her about them in 1981 naturally i came to look at the near death phenomenon both the experience and its after effects in a

different manner than the cohorts i had yet to meet

death is the only certainty in life yet many people shy away from thinking about it until something drastic happens such as the diagnosis of a life threatening illness or the sudden death of a loved one which can throw us into turmoil yet paradoxically contemplating death and the frequently experienced phenomenon of near death experiences ndes which are so little recognised and supported within the traditional medical environment can really help alter our relationship with death and release us from the fear that often surrounds it after an insightful introduction about why the subject of ndes is so worth exploring each chapter in this book addresses a key question what are the characteristics of an nde and are there different types are all nde experiences pleasant or can some be distressing who has ndes and under what circumstances do they occur how do they affect the people who have them and how can this change their lives how can ndes be scientifically explained aren't they just hallucinations what can we learn from ndes and can they change our attitude to life and death can a greater understanding of ndes lead to an evolution in our consciousness and an enhanced sense of spirituality as such this book really brings readers on an exploratory journey through the world of ndes challenging preconceptions about what they are and the impact they can have

encouraging us to accept and feel empowered by death rather than living in fear of it and giving us useful insights about life along the way

transformative lessons he has learned over four decades of research our culture has tended to view dying as the end of our consciousness the end of our existence a dreaded prospect that for many people evokes fear and anxiety but dr greyson shows how scientific revelations about the dying process can support an alternative theory dying could be the threshold between one form of consciousness and another not an ending but a transition this new perspective on the nature of death can transform the fear of dying that pervades our culture into a healthy view of it as one more milestone in the course of our lives after challenges us to open our minds to these experiences and to what they can teach us and in so doing expand our understanding of consciousness and of what it means to be human

this book investigates the astonishing claim that blind persons including those blind from birth can actually see during near death or out of body episodes the authors present their findings in

scrupulous detail investigating case histories of blind persons who have actually reported visual experiences under these conditions there is fascinating evidence that the blind do see in these moments but it is not sight as we think of it ring and cooper suggest a kind of transcendental awareness they refer to as mindsight it involves seeing in detail sometimes from all angles at once with everything in focus and a sense of knowing the subject not just visually but with multisensory knowledge human beings may be more talented than we think gifted with amazing abilities of perception this book is an opportunity to assess the evidence for yourself

studies of near death experiences show that such experiences not only provide a new certainty of post mortem survival but often function as a call for fundamental change in the present reported aftereffects encompass changes in attitudes beliefs and life orientation it is said that experiencers have lost their fear of death found their purpose in life or become more spiritual the

experience often declared to be indescribable inexplicable or ineffable is held by many to be the most important of their lives and moreover the best proof available for matters transcendent in what is it like to be dead jens schlieter argues that to understand recent testimonies of near death experiences we need to be aware of the history of innumerable reports of earlier near death experiences that were communicated and handed down in scores of newspapers journals and books collections of such testimonies have been published for more than 150 years accompanied by attempts to classify and interpret them schlieter analyzes the religious relevance of near death experiences for the experiencers themselves but also for the growing audience attracted by these testimonies near death experiences bear ontological epistemic intersubjective and moral significance ranging from reassurance that religious experience is still possible to claims that they initiate a new spiritual orientation in life or offer evidence for the transcultural validity of afterlife beliefs this study is the first to document and analyze four centuries of near death testimonies before the codification of the genre in the 1970s offering the first full account of the modern genealogy of near death experiences
