every culture rests on a bedrock of folk wisdom handed down through generations the pronouncements of philosophers are homespun by our grandmothers and find their way into our common sense what doesn't kill you makes you stronger do unto others as you would have done unto you happiness comes from within but are these truths really true today we all seem to prefer to cling to the notion that a little bit more money love or success will make us truly happy are we wrong in the happiness hypothesis psychologist jonathan haidt exposes traditional wisdom to the scrutiny of modern science delivering startling insights we learn that virtue is often not its own reward why extroverts really are happier than introverts and why conscious thought is not as important as we might like to think drawing on the rich inspiration of both philosophy and science the happiness hypothesis is a remarkable original and provocative book ancient wisdom in our time

this study of plato s phaedo promotes better understanding of its arguments for the soul s immortality by showing how plato intended them not as proofs but as properly dialectical arguments functioning in accordance with the method of hypothesis unlike the argument for the soul s immortality in the phaedrus which does seem intended as a proof the phaedo arguments are proceeding toward the first principles that could serve as the basis for a proof the most important being an account of the soul s own essential nature this study attends to the substantial progress the phaedo makes toward such an account it also considers socrates epistemic situation in the dialogue and the problem of whether his confidence in the face of death is misplaced if his arguments have not been proofs before considering how the concluding myth draws together several of the dialogue s main themes

the ancient alien hypothesis a comprehensive guide to extraterrestrial influence on human history explores the possibility of extraterrestrial life and its impact on human civilization the book traces the historical origins of the ancient alien theory and discusses the scientific concepts and theories that support it such as interstellar travel the fermi paradox and the drake equation the book also explores the possibility of finding extraterrestrial life on other planets and the use of wormholes to bridge gaps in space time it delves into the strange behavior of subatomic particles the holographic principle the theory of relativity the black hole paradox the theory of everything the dark matter mystery and the multiverse hypothesis the anthropic principle is used to explain how the laws of physics permit life and why the arrow of time flows in a one way direction the book then discusses the birth of the universe s fundamental forces during the grand unification epoch and how the cosmos expanded rapidly after the big bang through the inflationary universe lastly the fermion boson dichotomy chapter explores the building blocks of matter and how they may have been influenced by extraterrestrial life overall the ancient alien hypothesis provides a comprehensive guide for readers interested in the topic it combines scientific knowledge and ancient alien theory to present a compelling argument for the possibility of extraterrestrial life and its potential influence on human history

greco roman world can inform synoptic source critical discussion from a survey of ancient book production a study of the interplay between orality and textuality the identification and analysis of written sources and how they were adapted by later authors we are able to catalog a set of compositional methods of ancient writers from this we are able to test the extent to which three solutions to the synoptic problem i e the two gospel neo griesbach hypothesis the farrer goulder hypothesis and the two document two source hypothesis are consistent with the known practices of writers in antiquity we conclude that while all three of the theories had certain problems in light of our catalogue of compositional practices some had more problems than others in the end it appears that the two document hypothesis has the fewest problems in light of the compositional practices of antiquity

what if ancient sites such as machu picchu chichen itza the acropolis and temple mount are not only thousands of years old but much older until recently a lack of hard evidence has led mainstream archaeologists to dismiss theories of past civilizations as pseudoscientific attempts to resurrect ancient myths and legends however new archaeological discoveries are beginning to challenge conventional explanations inspired by charles haggood s hypothesis that the ice ages were the result of shifts in the geographic location of earth s poles independent researcher and author mark carlotto has discovered that numerous sites throughout the world are aligned to what appear to have been four previous positions of the north pole over the past 100 000 years by virtue of their alignment to ancient poles carlotto proposes a new hypothesis that the original sites were first established by a previous advanced technological civilization that existed throughout the world tens of thousands of years ago and were later co opted by our ancestors who rebuilt and expanded over and around the older structures while preserving the layout and orientation of the site to the original pole before atlantis considers the possibility that this previous technological civilization could have developed from an earlier migration of modern humans out of africa which later might have co existed with our primitive hunter gatherer ancestors and that past encounters with this older civilization were the source of ancient myths and legends of powerful gods lost continents and even atlantis mark carlotto is an aerospace engineer with over thirty years of experience in satellite imaging remote sensing signal and image processing pattern recognition and app development carlotto received a ph d in electrical engineering from carnegie mellon university in 1981 and has published over one hundred technical articles and written six books in before atlantis carlotto draws from his unique background and experience to propose new answers to basic questions concerning human origins ancient technology and archaeological enigmas

only recently have studies of the synoptic problem begun to ground their assessments of literary dependence in ancient literary conventions in an effort to appreciate more fully the evangelists modus operandi this study examines their appeal to greco roman rhetoric the science of speaking well focusing on a rhetorical form called the chreia the book examines rhetorical techniques and reasons for chreia adaptation particularly reasons why authors

changed this form both in theory and in the practice of the hellenistic authors plutarch and josephus with these reasons in mind the study assesses literary dependence among the synoptic gospels examining in detail a triple tradition and double tradition chreia in the end this work illustrates that hypotheses of markan priority like the farrer hypothesis and two document hypothesis are more rhetorically plausible than hypotheses of matthean priority while matthew and luke s adaptations of mark tend to reflect the rhetorical reasoning that we should expect mark s reasoning is often problematic for mark repeatedly works against the fundamental rhetorical principles of clarity and propriety
