David Nathan, a brilliant physician scientist, has been present at the cusps of history in this life and death field. The story he tells here is fascinating, and his book is captivating. Atul Gawande, MD, author of *Complications: A Surgeon's Notes on an Imperfect Science* and *Better: A Surgeon's Notes on Performance*, and Assistant Professor of Surgery, Harvard Medical School, says David Nathan is a true storyteller in the cancer treatment revolution. He tells stories that bridge cancer patients and cancer research as few others could. These gripping tales will be appreciated by those who live with cancer and those who strive to create new therapies.

Thomas Cech, PhD, recipient of the 1989 Nobel Prize in Chemistry and President of the Howard Hughes Medical Institute, says David Nathan, one of the nation's preeminent clinician scientists, tells the stories of three cancer patients, revealing compelling human facets, the dedication of the remarkable teams that care for these patients, and even more, the bravery and fortitude of the patients and their families.

Harold Varmus, MD, recipient of the 1989 Nobel Prize in Medicine, President of the Memorial Sloan-Kettering Cancer Center, and former Director of the National Institutes of Health, engaged by the compelling triumphs and tragedies of patients whose normal lives are inevitably altered by a life-threatening cancer, says the reader of *The Cancer Treatment Revolution* will easily appreciate the impact of the new cancer diagnostics and therapies compared to even relatively recent cancer treatments.

Karen Antman, MD, Dean, Boston University School of Medicine, says this personal, highly readable account by one of the leaders of the cancer treatment revolution explains how the revolution has come about and how it will change the future.

Living With Cancer 2006-05-12 in recent years the field of oncology has witnessed a number of technological advances including more precise radiation therapy and minimally invasive surgical techniques three dimensional 3d stereotactic and proton beam radiation therapy as well as laparoscopy and robotic surgery can enhance clinician s ability to treat conditions that were clinically challenging with conventional technologies and may improve clinical outcomes or reduce treatment related problems for some patients both patients and physicians seek access to these new technologies which are rapidly being adopted into standard clinical practice such demand is often propelled by marketing that portrays the

new technologies as the latest and greatest treatments available however evidence is often lacking to support these claims and these novel technologies usually come with higher price tags and are often used to treat patients who might have achieved similar benefits from less expensive conventional treatment the increased cost of novel treatments without adequate assessment of how they affect patient outcomes is a pressing concern given that inappropriate use of expensive technologies is one of the key factors that threaten the affordability of cancer care in the united states to explore these issues further the national cancer policy forum ncpf of the institute of medicine organized a workshop in july 2015 this is the third ncpf workshop in a series examining the affordability of cancer care participants explored clinical benefits and comparative effectiveness of emerging advanced technologies for cancer treatment in radiation therapy and surgery and potential strategies to assess the value and promote optimal use of new technologies in cancer treatment this report summarizes the presentations and discussions from the workshop
