1982

this monograph deals with various classes of deterministic continuous time optimal control problems which are defined over unbounded time intervals for these problems the performance criterion is described by an improper integral and it is possible that when evaluated at a given admissible element this criterion is unbounded to cope with this divergence new optimality concepts referred to here as overtaking weakly overtaking agreeable plans etc have been proposed the motivation for studying these problems arise primarily from the economic and biological sciences where models of this nature arise quite naturally since no natural bound can be placed on the time horizon when one considers the evolution of the state of a given economy or species the responsibility for the introduction of this interesting class of problems rests with the economist who first studied them in the modeling of capital accumulation processes perhaps the earliest of these was f ramsey who in his seminal work on a theory of saving in 1928 considered a dynamic optimization model defined on an infinite time horizon briefly this problem can be described as a lagrange problem with unbounded time interval the advent of modern control theory particularly the formulation of the famous maximum principle of pontryagin has had a considerable impact on the treatment of these models as well as optimization theory in general

in this innovative work jean hillier develops a new theory for students and researchers of spatial planning and governance which is grounded primarily in the work of gilles deleuze the theory recognizes the complex interrelation between place qualities and the multiple space time relational dynamics of spatial governance using empirical examples from england and australia hillier identifies the power of networks and trajectories through which various actors territorialize space and explores the social and political responsibilities of spatial managers and decision makers she considers what spatial planning and urban management practices could look like if they were to be developed along deleuzian lines and suggests alternative framings for spatial practice broad trajectories or visions of the longer term future and shorter term location specific detailed plans and projects with collaboratively determined tangible goals

since research on meiobenthos was last compiled in a textbook 2008 2009 the number of theoretical and applied studies has been growing rapidly supported by new methods and digital evaluation meiobenthology has developed into a wide field with more and more researchers studying cross disciplinary aspects new perspectives were summarized in a booklet 2019 to draw attention to promising research directions the present book written by leading experts is a compilation of new thinking data methods and approaches in many relevant fields of recent meiobenthos research the topics addressed range from bacteria and biofilms to globally changing processes from polar regions to the deep sea and from freshwater ecosystems to the ocean so this book is not simply another meiobenthos textbook it is an attempt to identify new horizons in meiobenthos research driven by the vision of advancing knowledge and understanding of benthic ecosystems

this book is open access under a cc by nc 2 5 license the gulf of mexico is an open and dynamic marine ecosystem rich in natural resources but heavily impacted by human activities including agricultural industrial commercial and coastal development the gulf of mexico has been continuously exposed to petroleum hydrocarbons for millions of years from natural oil and gas seeps on the sea floor and more recently from oil drilling and production activities located in the water near and far from shore major accidental oil spills in the gulf are infrequent two of the most significant include the ixtoc i blowout in the bay of campeche in 1979 and the deepwater horizon oil spill in 2010 unfortunately baseline assessments of the status of habitats and biota in the gulf of mexico before these spills either were not available or the data had not been systematically compiled in a way that would help scientists assess the potential short term and long term effects of such events this 2 volume series compiles and summarizes thousands of data sets showing the status of habitats and biota in the gulf of mexico before the deepwater horizon oil spill volume 2 covers historical data on commercial and recreational fisheries with an analysis of marketing trends and drivers ecology populations and risks to birds sea turtles and marine mammals in the gulf and diseases and mortalities of fish and other animals that inhabit the gulf of mexico

the meteoric rise of the photovoltaic pv industry is an incredible story in 2013 google s investments in pv systems totaled about half a billion dollars and warren buffet one of the famous investors invested 2 5 billion in the world s largest pv system in california these gigantic investments by major financial players were made only 40 years after the first two terrestrial pv companies solarex and solar power corporation were formed in the usa back in 1973 the two companies employed 20 people and produced only 500 watts of pv

2023-02-04

power now just 40 years later over a million people work in the pv industry the worldwide capacity of operating pv electric generators equals the capacity of about 25 nuclear power plants the pv industry is growing at an annual rate of 30 percent equivalent to about five new nuclear power plants per year today solar electricity is a significant supplier of electricity needs to the extent that pv is forcing the restructuring of 100 year old electric power utilities this book describes how this happened and what lies ahead for pv power generation

1989

this is an open access book which explores phenomenology as both an exceptionally diverse movement in philosophy as well as an active research method that crosses disciplinary boundaries the volume brings together lively overviews of major areas and schools of phenomenology as well as the most recent applications across a range of fields the first part reviews the state of the art in various areas of contemporary phenomenology including several distinct schools of husserl and heidegger scholarship as well as approaches derived from merleau ponty de beauvoir fanon and others an innovative quantitative analysis of citation networks provides rich visualizations of the field as a whole the second part showcases phenomenology as a living discipline that can advance research in other areas while some areas of interaction between phenomenology and other disciplines are by now well established e g cognitive science this volume sheds light on newer areas of application the goal is to move beyond discussions of philosophical method and highlight scholars who are actually doing phenomenology in a variety of areas including embodiment and questions of gender race and identity the arts visual art literature architecture and archaeology and anthropology this volume offers a concise introduction to cutting edge phenomenological research and is suitable for both students and specialists

## Stretching Beyond the Horizon

in every decade of the nuclear era one or two states have developed nuclear weapons despite the international community s opposition to proliferation in the coming years the breakdown of security arrangements especially in the middle east and northeast asia could drive additional countries to seek their own nuclear biological or chemical nbc weapons and missiles this likely would produce greater instability more insecure states and further proliferation are there steps concerned countries can take to anticipate prevent or dissuade the next generation of proliferators are there countries that might reassess their decision to forgo a nuclear arsenal this volume brings together top international security experts to examine the issues affecting a dozen or so countries nuclear weapons policies over the next decade in part i national decisions in perspective the work describes the domestic political consideration and international pressures that shape national nuclear policies of several key states in part ii fostering nonproliferation the contributors discuss the factors that shape the future motivations and capabilities of various states to acquire nuclear weapons and assess what the world community can do to counter this process the future utility of bilateral and multilateral security assurances treaty based nonproliferation regimes and other policy instruments are covered thoroughly

as the gulf of mexico recovers from the deepwater horizon oil spill natural resource managers face the challenge of understanding the impacts of the spill and setting priorities for restoration work the full value of losses resulting from the spill cannot be captured however without consideration of changes in ecosystem services the benefits delivered to society through natural processes an ecosystem services approach to assessing the impacts of the deepwater horizon oil spill in the gulf of mexico discusses the benefits and challenges associated with using an ecosystem services approach to damage assessment describing potential impacts of response technologies exploring the role of resilience and offering suggestions for areas of future research this report illustrates how this approach might be applied to coastal wetlands fisheries marine mammals and the deep sea each of which provide key ecosystem services in the gulf and identifies substantial differences among these case studies the report also discusses the suite of technologies used in the spill

response including burning skimming and chemical dispersants and their possible long term impacts on ecosystem services
