rigid eight wheelers with internal combustion engines were developed as a response to requirements and opportunities embedded in the 1933 Road and Rail Traffic Act although AEC was first in the field in late 1934 or early 1935 Leyland was able to announce its Octopus by the second world war the Octopus had become a favourite with operators known to carry a legal payload economically and reliably after the war the driveline of the Octopus basically remained unchanged until 1960 specification options were few yet the model remained a market leader with lengthy

waiting lists for new chassis the model remained in production until the late 1970s and as aec authority graham edge writes for most of its productive life the leyland octopus was the definitive british eight wheeler lorry the many superb photographs in this book range from shots from the 1930s including what is probably the first octopus chassis and a rare tew tipper to 1979 and an octopus 2 which started service that year with a compacting refuse body the text covers the full production story and there are appendices which give chassis and engine details

more complex and imposing than any other vehicle in the british emergency services the fire engine has a long and interesting history the earliest water pumps had been developed by the eighteenth century basic manual pumps that had to be hauled around by people or horses and were often only used on fire insured premises in the nineteenth and twentieth centuries horse drawn steam powered fire engines and eventually motorised fire engines came to revolutionise firefighting offering far greater versatility and the brigades came to be run by the municipalities in this beautifully illustrated introduction eddie baker charts the history of fire engines and their variants and the increasingly complex equipment they have carried such as high rise ladders and high pressure hoses he also explains the wider history of the fire service and how the engines have been shaped by its needs and most importantly those of the firefighters themselves

vilified as the great failure of all london transport bus classes the dms family of daimler fleetline was more like an unlucky victim of straitened times desperate to match staff shortages with falling demand for its services during the late 1960s london transport was just one organization to see nationwide possibilities and savings in legislation that was about to permit double deck one man operation and partially fund purpose built vehicles however prohibited by circumstances from developing its own rear engined routemaster frm concept lt instituted comparative trials between contemporary leyland atlanteans and daimler fleetlines the latter came out on top and massive orders followed the first dmss entering service on 2 january 1971 in service however problems quickly manifested sophisticated safety features served only to burn out gearboxes and gulp fuel the passengers meanwhile did not appreciate being funnelled through the dms s recalcitrant automatic fare collection machinery only to have to stand for lack of seating boarding speeds thus slowed to a crawl to the extent that the savings made by

laying off conductors had to be negated by adding more dmss to converted routes second thoughts caused the ongoing order to be amended to include crew operated fleetlines dms noise concerns prompted the development of the b20 quiet bus variety and brave attempts were made to fit the buses into the time honored system of overhauling at aldenham works but finally the problems proved too much after enormous expenditure the first dmss began to be withdrawn before the final rts came out of service and between 1979 and 1983 all but the b20s were sold as is widely known the dmss proved perfectly adequate with provincial operators once their london features had been removed obo was to become fashionable again in the 1980s as the politicians turned on london transport itself breaking it into pieces in order to sell it off not only did the b20 dmss survive to something approaching a normal lifespan but the new cheap operators awakening with the onset of tendering made use of the type to undercut lt and it was not until 1993 that the last dms operated

the leyland beaver name survived for over forty years from the first appearance of this distinguished model in 1928 within ten years of its inception there was an almost confusing assortment of beavers suitable for just about every task a lorry could perform leyland motors had perfected the top weight four wheeler and dominated the market for this particular kind of vehicle after the second world war for fifteen years or so beavers were often seen as part of wagon and trailer outfits their lorries exuding strength and reliability as road transport modernised in the 1960s so beaver articulated lorries became increasingly popular beaver production lasted until 1971 when it was phased out in favour of the 500 series buffalo because of the longevity of the production of the beavers the story is quite complex embracing not just the uk but also the models sold overseas often in modified forms graham edge charts our way clearly through this history and in his appendices includes chassis and engine details the photographs all high quality are former leyland archive material housed at the british commercial vehicle museum trust the images range from 1928 and what is believed to be the first leyland beaver to a 1968 two pedal model coupled to a 40 ft trailer hauling for a steel stockholder
