*Xero For Dummies* 2010-12-01 this volume presents papers from

the fourth biennial information systems foundation workshop held at the Australian National University in Canberra from 2-3 October 2008. The focus of the workshop was as for the others in the series: the foundations of information systems as an academic discipline. The emphasis in this workshop was on the movement known as design science and its importance in practical disciplines such as information systems. The chapters in the volume provide a critical examination of current design science ideas with the role of human creativity given special mention. The philosophical underpinnings of design science thinking are also examined. Practically, the volume shows how the design science approach can be used in academic research that leads to artefacts that add value for individuals, organizations and society.

*Inclusion Strategies That Work for Adolescent Learners!*

2014-09-04 this innovative book takes seriously the ordinary activities of entrepreneurship and maps out new pathways for scholars to understand the nature properties and implications of studying practices for entrepreneurship studies entrepreneurship is neither an art nor a science but a bundle of practices as peter drucker once observed curiously however academic research on entrepreneurship mostly abstracts away from practical activity in contrast entrepreneurship as practice takes ordinary activities of entrepreneurship seriously by mapping out new pathways for scholars to consider the everyday practices through which entrepreneurship occurs each chapter draws on contemporary theories of practice to illuminate the nature properties and implications of studying the practices of entrepreneurship the chapters in this book were originally published as a special issue of the journal entrepreneurship regional development
