**Green Business Process Management. Usage of Existing and New Tools for Achieving the Ecological Goals 2017-09-22**

seminar paper from the year 2018 in the subject computer science commercial information technology grade 2 3 university of münster language english abstract the aim of this work is to find relevant approaches of green business process management bpm and analyse them with regard to their purpose it was considered whether

the approaches are extensions of the traditional bpm concepts adapted to the ecological dimension or if they are newer techniques and tools introduced by the rise of green information systems is in order to achieve this goal the basic concept of bpm and its way towards more sustainability is presented at the beginning followed by the explanation of current approaches afterwards the bpm lifecycle which serves as a suitable framework to allocate the different tools and techniques is introduced based on the rough presentation the main part deals more intensively and in more detail with the tools and techniques of green bpm approaches these tools and techniques were mapped into an adapted green bpm lifecycle so that relevant implications could be derived in the discussion section but first the mentioned tools and techniques are classified according their field of acting finally the discussion part takes place where the major contributions are analysed and interpreted according to the observed results and background knowledge companies have been looking at sustainability for several decades recognizing that by reducing pollution they can also maximize their profits thus sustainability in the field of information systems is becoming increasingly important as topics like green is and it are addressed these deal with the reduction of it consumption and emissions because of the implementation of more sustainable business activities however this raises the requirement for approaches in the field of business process management research and practice lacked an appropriate approach to connect these two areas of green is and bpm which is why the notion of green business process management was introduced experts are developing instruments and techniques whose primary objective is to integrate sustainability into the different phases of the business process lifecycle so that more ecological processes can be realized such approaches help organizations in defining their optimal business strategies regarding the four dimensions of time quality flexibility cost and now adding the aspect of environment

## **Achieving Quality in Software 2000**

software quality is a generalised statement difficult to agree or disagree with until a precise definition of the concept of software quality is reached in terms of measurable quantities unfortunately for the software technology the basic question of what to measure how to measure when to measure how to deal with the data obtained are still unanswered and are also closely dependant on the field of application in the past twenty years or more there have been a number of conferences and debates focusing on the concept of software quality which produced no real industrial impact recently however the implementation of a few generic standards iso 9000 ieee etc has produced and improved application of good practice principles at the industrial level as a graduate in physics i still believe it is a long way before the concept of software quality can be defined exactly and measured if ever this is way i think the aquis series of conferences is important its object begin to provide a platform for the transfer of technology and know how between academic industrial and research institutions in the field of software quality their objects are to provide a forum for the introduction and discussion of new research breakthroughs in software quality to provide professional software quality engineers with the necessary exposure to the results of current research to expose the research community to the problems of practical application of new results

## **Achieving Quality Software 2012-12-06**

the rapid growth in use of programmable technology in nearly all sectors of engineering is a well known established trend and one which there is every reason to believe will continue into the foreseeable future the drivers of this trend include cost flexibility rich functionality and certain reliability and safety advantages however as explained in this book these advantages have to be carefully weighed against a number of disadvantages which amongst other things have fundamental implications for reliability and safety ideally a programmable system would be viewed as a fusion of hardware software and user or skinware operating under a set of environmental conditions to date such a unifying model does not exist and so hardware software and human factors are still considered largely as three separate disciplines albeit with certain interdependencies established techniques are available which enable the engineer to develop systems comprising purely hardware

components to a prescribed reliability and performance software however is fundamentally different in a number of ways and does not lend itself to equivalent analysis a major problem with software is its poor visibility and consequently the great difficulty in understanding and predicting its behaviour in all circumstances this results in the ever present software design flaws or bugs which have plagued the software industry from its beginnings
